## INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

A site investigation will be conducted pursuant to COGCC rule 911 at the Pronghorn 31-34-6HZ oil and gas location pertaining to the cut/cap of the Pronghorn 31-34-6HZ wellhead (API: 05-123-34823) and decommission of production facilities. See site map exhibit for details.

## PROPOSED SAMPLING PLAN

### Proposed Soil Sampling

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Grab confirmation soil samples will be collected from beneath the above ground oil tank, water vault, separator, and wellhead. A grab confirmation soil sample will be collected from beneath the produced water vault as well as from the side wall that indicated the highest field screening levels. Soil samples will be analyzed by a certified laboratory for TPH (total volatile [C6-C10] and extractable [C10-C36] hydrocarbons), organic compounds in soil per COGCC Table 915-1, and EC, SAR, pH, and boron. All samples collected will be analyzed by a certified laboratory using approved COGCC laboratory analysis methods.

### Proposed Groundwater Sampling

Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

### Proposed Surface Water Sampling

Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

### Additional Investigative Actions

Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

Were background samples collected as part of this site investigation?

One background sample was collected from the depth of excavations to remove production equipment from areas within native soils undisturbed by oil and gas activities. Background sample BKG01 @5' was analyzed for soil suitability and results were averaged to generate baseline levels for native soil conditions.

Is further site investigation required?

Background samples will be collected in native soils from 6 inches below ground surface for pH and approximately 5 feet below ground surface for SAR for analysis by a certified laboratory.
