Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

In accordance with Rule 911.a we are submitting this Form 27 to close the orphan well pad. Historically in this area we have occasionally encountered what appears to be historical drill cuttings remaining adjacent to the wells. This Form 27 workplan is being submitted to address the cuttings if encountered.

PROPOSED SAMPLING PLAN**Proposed Soil Sampling**

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Whiting has collected >70 discrete confirmation samples and analyzed them for the full Table 915-1 Cleanup Concentrations during the assessment and remediation at multiple indistinguishable orphan well sites in the same field. Upon review of this data the PAH by EPA Method 8270D results consistently (in over 70+ samples) found impacts from non-detect to significantly lower than Table 915-1 cleanup concentration levels (see attached cumulative Confirmation Sample Result Table). Based upon these results Whiting is proposing a Modified Table 915-1 analysis suite that does not include the PAH analytes as it is not a constituent of concern at these sites. All other Table 915-1 analytes will be included in the Modified Table 915-1 Cleanup Concentrations. (see continued sampling plan under comments...)

OTHER INVESTIGATION INFORMATION

☐ Were impacts to adjacent property or offsite impacts identified?

☒ Were background samples collected as part of this site investigation?

Multiple discrete background grab samples were collected throughout the field to determine the naturally occurring background concentrations of EC, SAR, pH, and Arsenic. The resulting lab data indicated that EC ranged from 0.178 to 10.4 mmhos/cm, SAR was < 6, pH ranged from 7.89 to 9.04, and Arsenic ranged from 4.67 to 8.08 mg/kg. These ranges along with Table 915-1 were utilized to evaluate the onsite samples.

☐ Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards) Volume of liquid waste (barrels)

☐ Is further site investigation required?

REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

If encountered the cuttings will be removed via a combination of mechanical and hand excavation in an effort to minimize disturbing the surrounding vegetation. The removed cuttings will be staged onsite.

REMEDICATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

If encountered the cuttings (or any impacted material) will be staged and shredded onsite adjacent to the wells. The cuttings will then be processed through a soil shredder with a combination of soil and/or amendments at a ratio necessary to achieve Modified Table 915-1 Cleanup Concentrations.

Operator shall comply with the COGCC 1000-Series Reclamation Requirements for all impacted and disturbed areas.

RECLAMATION PLAN

RECLAMATION PLANNING

Describe reclamation plan. Discuss existing and new grade recontouring; method and testing of compaction alleviation; and reseeding program, including location of new seed, seed mix and noxious weed prevention. Attach diagram or drawing.

The location will be reclaimed to the present grade of the location or to the approximate original contour of the landscape and consistent with the 1000-series Rule. Seeding of the disturbed area will be performed in accordance with its intended use. The seed mix will be prescribed by the landowner. There are no known noxious weeds in the immediate area of the disturbance.

Is the described reclamation complete? _____

Does the reclamation described herein constitute interim or final reclamation of the Oil and Gas Location?

☐ Interim ☐ Final

Did the Surface Owner provide the seed mix? _____

If YES, does the seed mix comply with local soil conservation district recommendations? _____

Did the local soil conservation district provide the seed mix? _____

OPERATOR COMMENT

Six (6) soil samples were collected from the former wellhead, area of concern, and tailings piles at Emerald 147 on 4/14/2022 and 6/15/2022 and analyzed for COGCC Table 915-1 contaminants of concern minus PAH analysis as approved by COGCC. The locations of the former wellhead, area of concern, and tailings pile are shown on Figure 1. Laboratory test results indicated that contaminants of concern were either not detected at or above the laboratory reporting limit or were below COGCC Table 915-1 cleanup concentrations, excluding electrical conductivity (EC), sodium adsorption ratio (SAR), and arsenic. A summary of concentrations detected above COGCC Table 915-1 cleanup concentrations is provided below.

- Electrical Conductivity (EC): EC was detected at concentrations of 6.77 and 6.40 mmhos/cm which, is above the Table 915-1 cleanup concentration of < 4 mmhos/cm, but are within background EC concentrations, which range from 0.178 and 10.4 mmhos/cm.
- Sodium Adsorption Ratio (SAR): SAR was detected at concentrations of 6.04 and 7.08 SAR units on 4/14/2022, which is above the Table 915-1 cleanup concentration of 6 SAR units, but after additional treatment was resampled on 6/15/2022 and was detected at concentrations of 0.717 and 0.927 SAR units, which are below the Table 915-1 cleanup concentrations.
- Arsenic: Arsenic was detected at concentrations of 8.29, 6.07, 6.06, and 6.83 mg/kg, which are above the Table 915-1 cleanup concentration of 0.68 mg/kg, but are within background arsenic concentrations, which range from 4.16 mg/kg to 10.4 mg/kg
