

Parachute Water Management Facility (WMF)

Facility IDs 149015, 426954, 426955, & 426956

909.j.(6) Alternative Sampling Plan

A. INTRODUCTION

TEP Rocky Mountain LLC (“TEP”) has prepared this Alternative Sampling Plan for director approval per COGCC Rule 909.j.(6) for the Parachute Production Pit #1, Parachute Production Pit #2, Parachute Production Pit #3, Parachute South Evap Pond, and the Parachute North Evap Pond which all are located at the Parachute Water Management Facility (WMF). TEP has extensive water reuse and recycle infrastructure to utilize produced water from approximately 7,000 natural gas wells in the Piceance Basin for hydraulic fracturing of new natural gas wells, primarily in Garfield and Rio Blanco Counties. Twenty-eight (28) lined produced water pits are part of this infrastructure. Due to the very large number of individual actively producing wells it is impractical to sample produced water from each well. However, since proximate wells are producing from the same, or similar, formations, collecting and analyzing produced water from each lined pit will provide representative analytical results.

B. LOCATION DESCRIPTION

The Parachute WMF is located within Section 1, Township 7 South, Range 96 West in Garfield County (lat. 39.47148, long. -108.065561). A facility diagram is attached for reference. All ponds are lined, fenced, and netted. The ponds have the following capacities.

Parachute Production Pit #1 = 176,801 barrels

Parachute Production Pit #2 = 144,253 barrels

Parachute Production Pit #3 = 51,514 barrels

Parachute South Evap Pond = 125,951 barrels

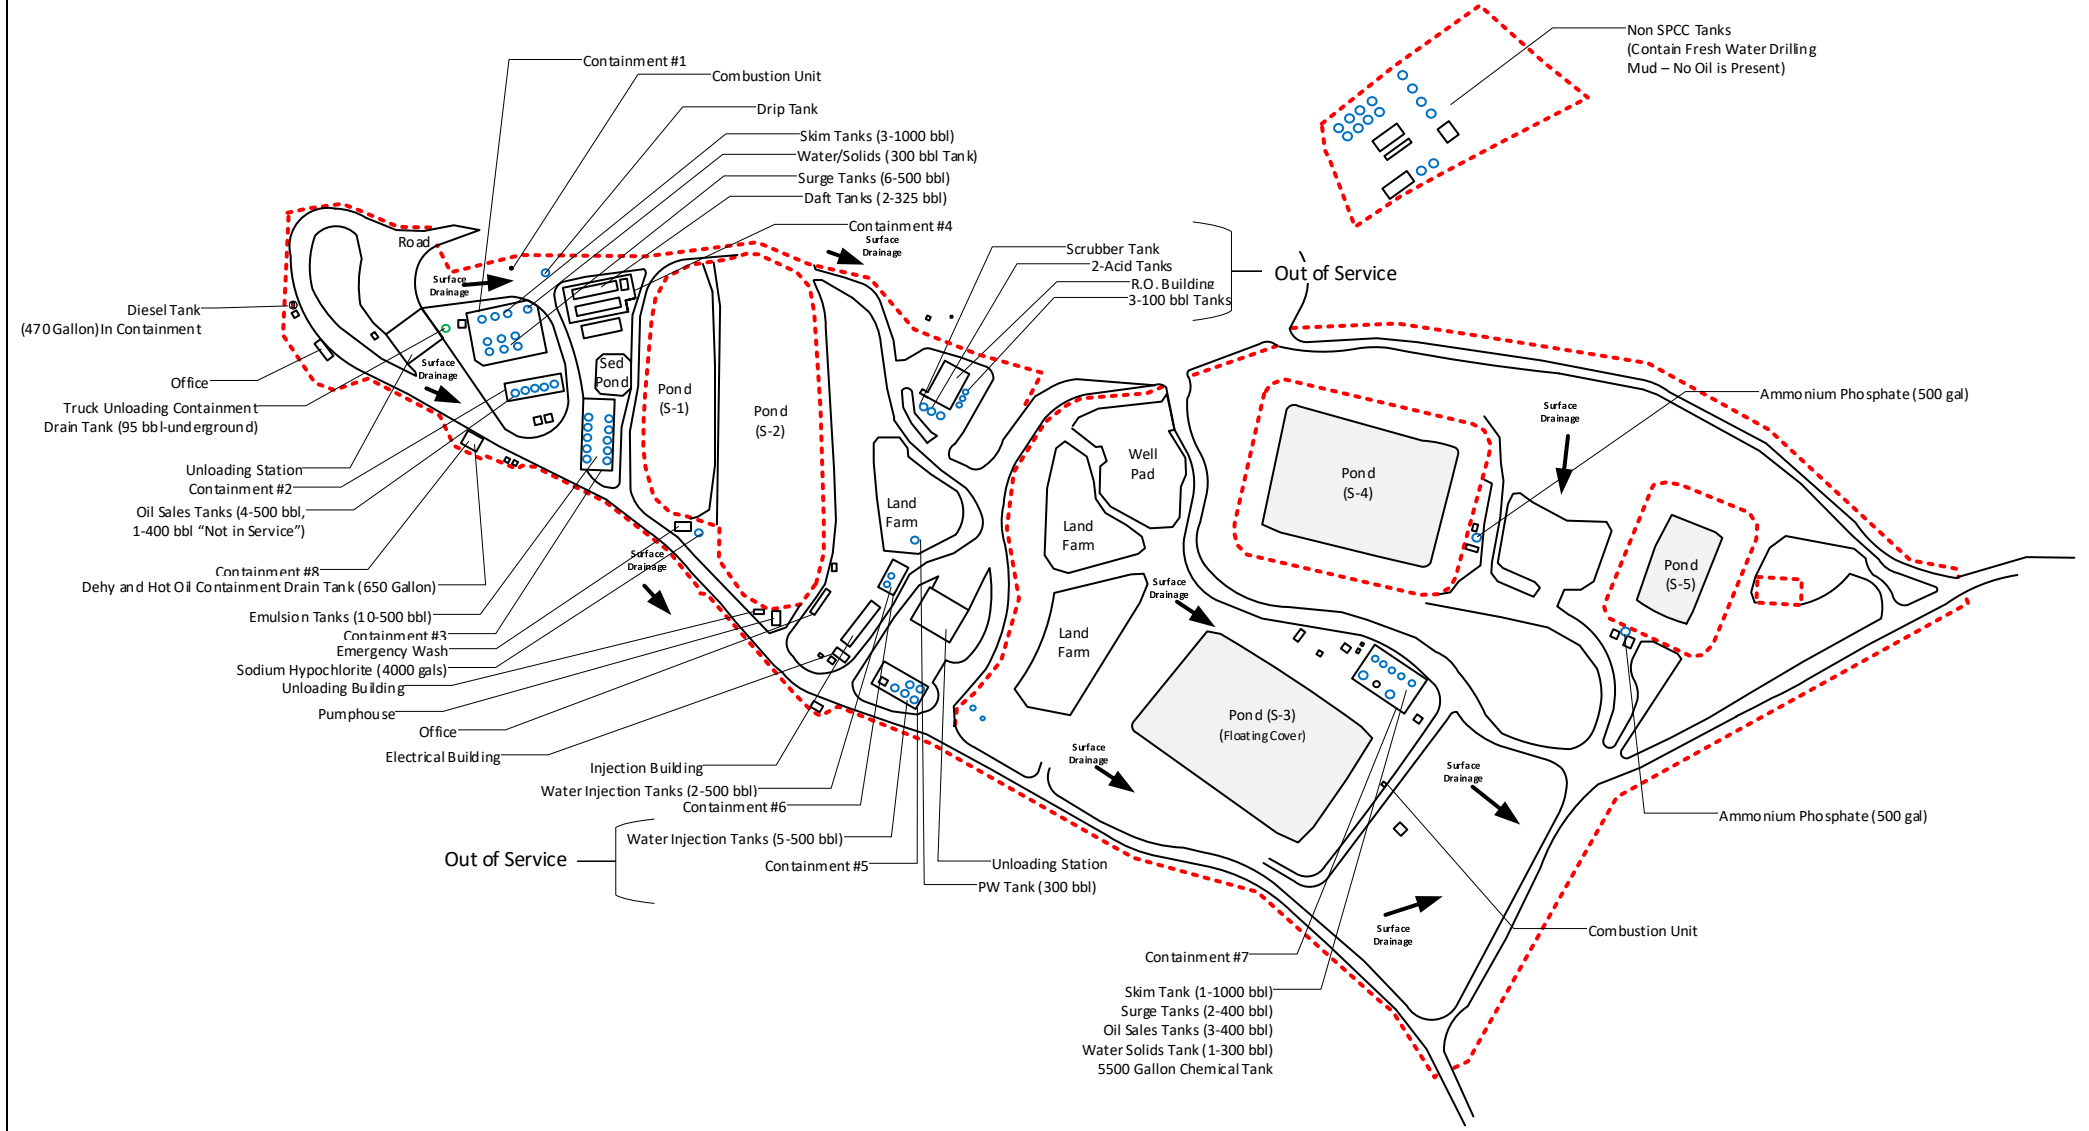

Parachute North Evap Pond = 43,487 barrels

C. PRODUCED WATER SAMPLING PROTOCOL

In accord with COGCC Rule 909.j.(1) produced water samples will be collected from the inlet produced water pipeline entering the pit and analyzed for the properties and constituents listed below. A list of wells that send produced water to the Parachute WMF is attached.

- pH
- Specific conductance
- Total dissolved and suspended solids (TDS and TSS)
- Alkalinity (total, bicarbonate, and carbonate as CaCO₃)
- Major anions (bromide, chloride, fluoride, sulfate, nitrate and nitrite as N, and phosphorus)
- Major cations (calcium, iron, magnesium, manganese, potassium, and sodium)
- Other elements (barium, boron, selenium, and strontium)
- Naphthalene
- Total petroleum hydrocarbons (“TPH”) as total volatile hydrocarbons (C6 to C10) and total extractable hydrocarbons (C10 to C36)
- BTEX compounds (benzene, toluene, ethylbenzene, and xylenes)
- Radium (226Ra and 228Ra)

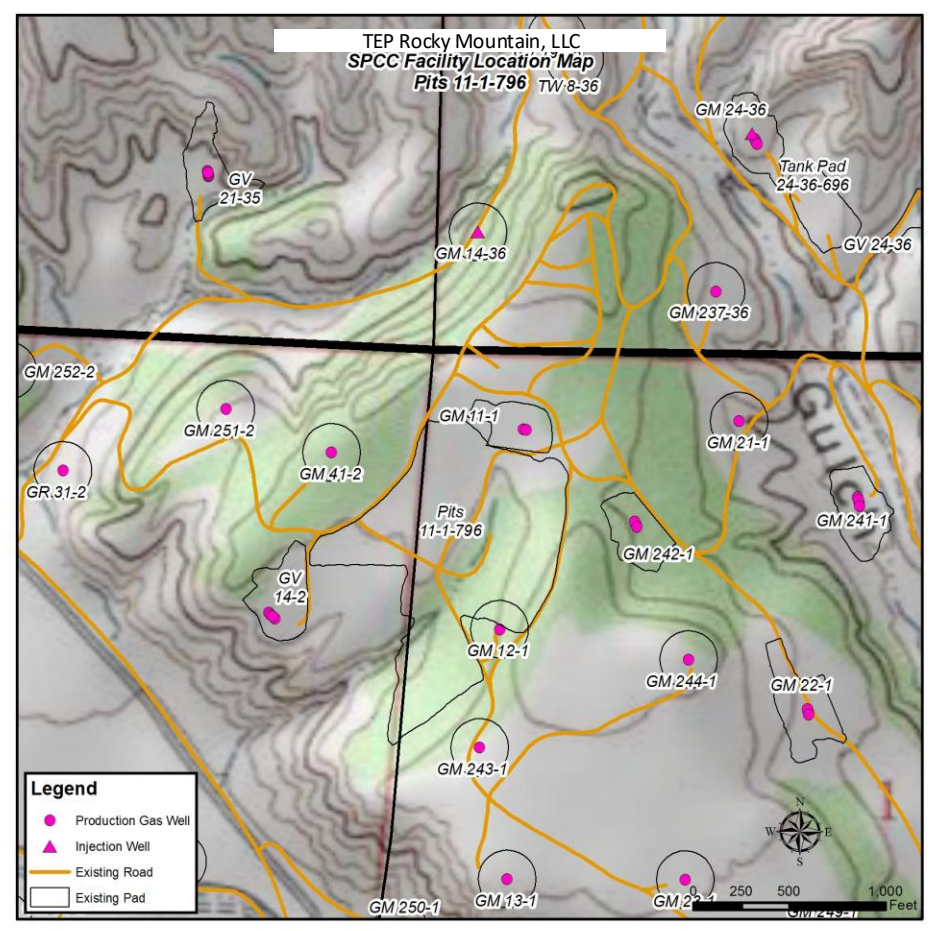

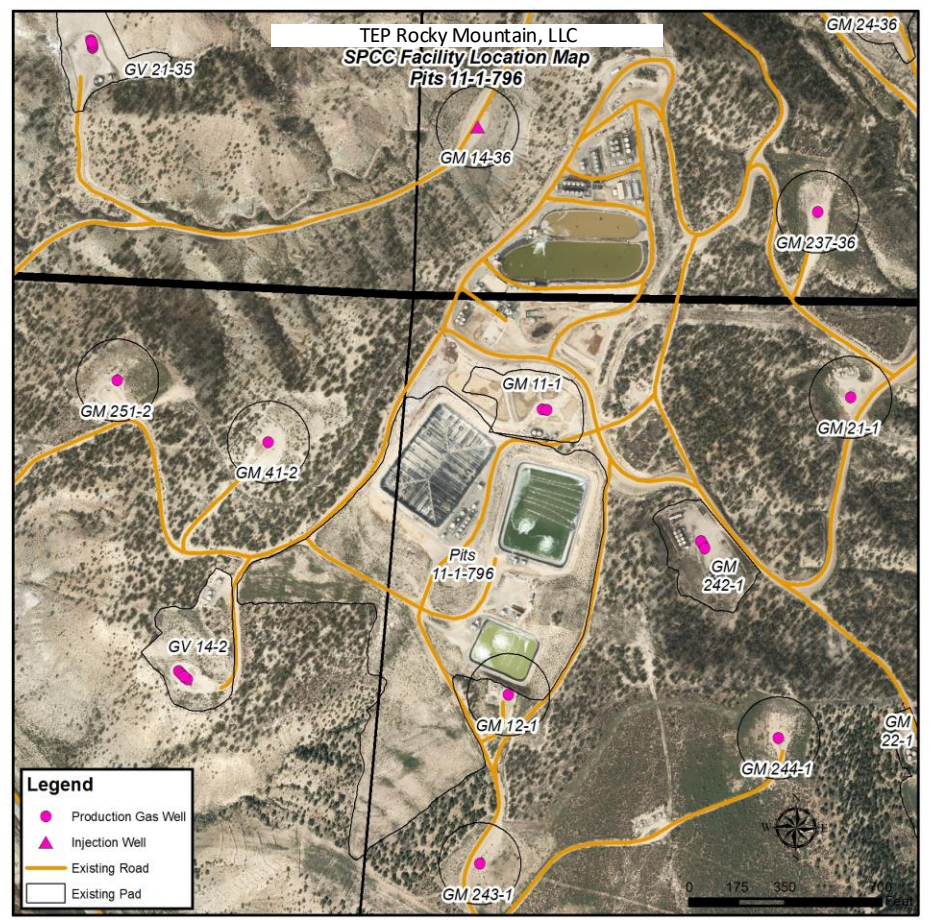

In accord with COGCC Rule 909.j.(3) analytical results will be submitted to the COGCC via Form 43.

Note: This unit is subject to the site security plan for the Piceance Basin. Plan is located at:
TEP Rocky Mountain, LLC
1058 County Road 215
Parachute, CO 81635

Note: Some measurements on drawing are estimates and not field verified.
