* DESCRIBE LEASE
 We propose to drill this well with rotary tools to a depth of 6000' or 100' penetration into the "J" formation. An induction Electric Survey will be run from base of surface casing to total depth and a BHC Sonic G.R. minimum run. If commercial production is encountered a 5-1/2" O.D., 14# oil string will be run and set through the producing zone and cemented with sufficient cement to displace 1000'.

IN ABOVE SPACE DESCRIBE PROPOSED PROGRAM: If proposal is to deepen or plug back, give data on present productive zone and proposed new productive zone. If proposal is to drill or deepen directionally, give pertinent data on subsurface locations and measured and true vertical depths. Give blowout preventer program, if any.
