**General Comment:**

On 7/25/2022 COGCC staff, Kris Neidel inspected spill 482603 that was reported to COGCC by D90 (operator). The following was observed; a fine coat of oil had covered dirt outside of containment approximately 80 feet from the source of spill, some fluid (oil and water was pooling inside of the secondary containment). At the time of inspection, crews had removed some oil that had coated; piping, wiring, containment, pumps. D90 staff informed COGCC that all wells on pad were producing, either via triplex jet pump or rod pump. Vegetation that was impacted from the spray/spill should be removed and disposed of as E&P waste. The secondary containment should be evaluated for integrity, see photo #2 and #3. The adjacent triplex pump, on the Patriot 12-32, had what appeared to be excessive vibration in the piping off of pump, this vibration should be evaluated for proper operation. The Oxbow pad has 3 large generators and 6 conex that reportedly are mining bitcoin. It did not appear that the combustors were burning any gas.

**Environmental****Spills/Releases:**

Type of Spill: OIL

Estimated Spill Volume: \_\_\_\_\_

Comment: volume can not be estimated based on inspection. Spill was reported to COGCC.

Corrective Action: continue cleaning and document impacts compaired to Table 915-1.
