**INITIAL ACTION SUMMARY**

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

The City and County of Denver will be plugging the DIA 35-11 well and decommissioning and removing the associated flowlines and production equipment. Soil samples will be collected in accordance with COGCC Rule 915.e(2)B. Soil samples will be collected from the well head excavation and flow line path(s), as well as any other area likely to have been impacted. If groundwater is discovered during remediation activities, a water sample will be collected. Samples will be submitted for laboratory analysis of Table 915-1 constituents.

**PROPOSED SAMPLING PLAN**

**Proposed Soil Sampling**

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Confirmation soil samples will be collected for laboratory analysis of COGCC Table 915-1 constituents in the following areas: wellhead, flowline segments, and below each piece of production equipment, if present. Prior to collecting confirmation soil samples, soil will be field screened using a PID and visual/olfactory observations. Impacted soil will be removed and disposed of as E&P waste. Remaining soil that shows the highest degree of impact during field screening will be sampled for laboratory analysis. If no potential impacts are observed, samples will be collected in accordance with COGCC Rule 911.a(4) and 915.e.(2) Guidance Documents. See attached map for proposed soil sampling locations.

**Proposed Groundwater Sampling**

Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

If a pathway to groundwater is discovered or groundwater is encountered during remediation activities, a sample(s) will be collected and analyzed for Table 915-1 constituents.

**Proposed Surface Water Sampling**

Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

No surface water sampling is anticipated at this time.

**Additional Investigative Actions**

Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

Field personnel will perform a visual inspection of the site. If the presence of hydrocarbons is expected based on visual or olfactory observations, field personnel will field screen soils and evaluate hydrocarbon impacts in the field prior to sampling at each location.

## REMEDIAL ACTION PLAN

### SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Initial site investigation will include field screening of soils near the wellhead, flowline path(s), and any other area likely to have been impacted using a PID and visual/olfactory observations. Additionally, discrete soil samples will be collected in these areas to profile any potential impacts. Depending on results from the initial site investigation, a remediation plan will be created to address site impacts and will be documented on a supplemental Form 27.

### REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Impacted material discovered during the scope of this work plan will be removed and disposed of as E&P waste at an approved facility. Any additional remediation activities will be documented on a supplemental Form 27.
