Details of Plan of Work: (State names of and expected depths to objective sands: Show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work.)

On December 8, 1950, we landed 6 joints, 211.29 ft., of 10-3/4" OD, S-40 & H-40, 40.50# & 32.75# casing at 222.29 ft. from Kelley bushings and cemented with 150 sacks regular cement, 2% calcium chloride mixture. The cement circulated to the surface and was allowed to set 49-1/4 hours when a pressure test was applied. After drilling the float collar and 15 ft. of cement 500 psi. pump pressure was held on the casing for 30 minutes with no drop in pressure. The remainder of cement was then drilled after 2-1/2 hours.
