General Comment:

Inspector Alex Klink on site at 11:20 AM to observe and witness plugging operations. See link at end of report for inspection photos.

At 11:20 AM the well was blown down and current operations were retrieving packer at 4488'.

The packer did not come free, wireline truck rigged up, cut the tubing at 4460'. Tubing and packer will still not come free.

Well was blown down into open top tanks with no emission capture, control, or combustion, as COA from Form 6 requires. There was 350 PSI on the tubing when blow down commenced, and blow down lasted ~1 hour. Portable toilet was strapped and secured from being knocked over. Directional rig signs were installed, and 4 fire extinguishers on site.
