Interim reclamation complete, site ready for inspection. Per Rule 1003.e(3) describe interim reclamation procedure in Comments below or provide as an attachment and attach required location photographs.

**Field inspection will be conducted to document Rule 1003.e. compliance**

**FINAL RECLAMATION**

Final Reclamation will commence approximately \_\_\_\_\_

Per Rule 1004.c.(4) operator shall submit Sundry Notice reporting final reclamation is complete and site is ready for inspection when vegetation reaches 80% coverage.

Final reclamation complete, site ready for inspection. Per Rule 1004.c(4) describe final reclamation procedure in Comments below or provide as an attachment.

**Field inspection will be conducted to document Rule 1004.c. compliance**

Describe why venting or flaring is necessary. If reporting per Rule 903.b.(2), 903.c.(3).C, or 903.d.(2), include the explanation, rationale, and cause of the event:

Flaring is expected to occur only during flowback operations where nitrogen from the completion fluid is being returned to surface. When the nitrogen concentration has diminished to allowable pipeline specifications, the gas stream will be routed to the existing sales line.

Describe how the operation will protect and minimize adverse impacts to public health, safety, welfare, the environment, and wildlife resources. If reporting per Rule 903.d.(2), include BMPs used to minimize venting on the BMP Tab:

Sending the gas stream through a flare will combust any hydrocarbon gases that could be entrained with the nitrogen gas. This will minimize the release of hydrocarbons to the atmosphere therefore minimizing our greenhouse gas impact. Most of the gas going to the flare will be nitrogen and we anticipate very little hydrocarbon being flared. Once hydrocarbons are at surface we will immediately look to turn to the sales line as soon as it is saleable quality.

Total volume of gas vented or flared: 500 mcf  estimated  measured  
Total duration of emission event: 72 hours  consecutive  cumulative

Submit a single representative gas analysis via Form 43 to create a Sample Site Facility ID# for this Location. Reference the Form 43 document number on the Related Forms tab.

**GAS CAPTURE PLAN**

Describe the plan to connect to a gathering line or beneficially use the gas; include anticipated timeline:

Existing facilities are already in place an no additional work is necessary. This will allow us to sell gas as soon as it reaches saleable quality.

A Gas Capture Plan that meets the requirements of Rule 903.e is attached.

**H2S REPORTING**

- Intentional release of H2S gas due to Upset Condition or malfunction.
- Intent to temporarily abandon well with potential H2S concentration >100 ppm.

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.
