 API # 05-123-20054
 NWNE Sec. 22, T4N, R67W
 Weld County, Colorado
 Fremont Project No. C022-013
 Facility # 331032, Remediation # 21781

Dear Mr. Peterson:

Enclosed please find a copy of the above referenced Site Investigation Report for the Beeler 22-12, 13 site in Weld County, Colorado. The enclosed report describes site investigation and sampling efforts to assess soil and groundwater quality at the site.

Please contact me at (303) 956-8714 if you require any additional information.

Fremont appreciates the opportunity to provide this service.

Sincerely,
FREMONT ENVIRONMENTAL INC.

Paul V. Henahan, P.E.
Senior Consultant

1.0 INTRODUCTION

The purpose of this document is to present information collected to delineate the extent of petroleum-impacted soil at the Beeler 22-12, 13 (Beeler) tank battery location in Weld County, Colorado. Impacted soil and groundwater were identified at the Beeler tank battery during facility closure activities. A site investigation was completed on May 3, 2022. Fifteen soil borings were advanced at the site to delineate the magnitude and extent of subsurface soil and groundwater impacts.

2.0 BACKGROUND INFORMATION

2.1 Site Location

The Beeler 22-12, 13 tank battery is located approximately four miles south of Milliken, Colorado in Weld County as shown on Figure 1. The site is located in a rural and agricultural area approximately 2.3 miles south of the intersection of County Road 44 and County Road 21. The location is further described as the NW $\frac{1}{4}$ of the NE $\frac{1}{4}$ of Section 22, Township 4N, Range 67W.

2.2 Site History

The site consists of the Beeler 22-12, 13 tank battery which services the Beeler 22-12 and Beeler 22-13 natural gas wells. The Beeler 22-12 natural gas well was drilled in 2001 to a depth of approximately 7,398 feet.

Historical releases were discovered beneath multiple pieces of equipment at the Beeler tank battery during decommissioning activities in March 2022. A site investigation to determine the extent of soil impacts was undertaken on May 3, 2022. Groundwater was not encountered at that time.

3.0 SITE INVESTIGATION ACTIVITIES

3.1 Soil Borings/Monitoring Wells

A total of 15 soil borings were advanced utilizing a Geoprobe rig during the single-day site investigation conducted at the former Beeler tank battery on May 3, 2022. One of the 15 borings was completed as a 1-inch diameter, temporary PVC stick-up monitoring well, which has not produced water since its installation. These borings were used to delineate the extent of soil impacts at the site. The locations of the soil borings are illustrated on the attached figures.

Generally, the subsurface consists of clay that extends to a maximum depth of approximately six feet. The clay is underlain by a poorly graded sandy clay extending to a depth of at least 12 feet. The maximum depth of the borings was 12 feet. Refusal was encountered across the site between 9 and 12 feet. Geologic cross sections illustrating the soil lithology are presented on Figure 4.

The 1-inch diameter monitoring well was constructed with a 10-foot section of well screen placed at a total depth of approximately 12 feet and completed at the ground surface as a temporary PVC stick-up well. The well remains dry after several gauging attempts following the site investigation. Soil samples from each of the borings were evaluated in the field using a photoionization detector (PID). Logs of the borings and monitoring well are presented in Appendix A.

Soil samples were collected from each of the borings and sent to Summit Scientific, Inc. in Golden, Colorado for the analyses of for benzene, toluene, ethylbenzene and total xylenes (BTEX), naphthalene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene (TMB), Total Petroleum Hydrocarbons – Gasoline Range Organics (TPH-GRO) by EPA method 8260B, TPH – Diesel Range Organics (TPH-DRO), Extended Range Organics (TPH-ORO) by EPA method 8015, Polycyclic Aromatic Hydrocarbons (PAH) Acenaphthene, Anthracene, Benzo (a) anthracene, Benzo (a) pyrene, Benzo (b) fluoranthene, Chrysene, Dibenz (a,h) anthracene, Fluoranthene, Fluorene, Indeno (1,2,3-cd) pyrene, Pyrene, 1-Methylnaphthalene, 2-Methylnaphthalene by EPA method 8270D.

Soil impacts exceeding the COGCC Table 915-1 protection of groundwater soil screening levels (PGSSLs) for 1-Methylnaphthalene were observed in two of the 15 borings. The soil chemistry is presented on Figure 5 and summarized in Tables 1 and 2. The laboratory's report is provided in Appendix B.

4.0 DISCUSSION

A site investigation was conducted at the Beeler location on May 3, 2022 resulting from a historical release discovered beneath the separator, produced water vault and aboveground storage tank during site decommissioning activities. Fifteen soil boings were advanced and one was completed as a temporary monitoring well, which remains dry, to delineate the magnitude and extent of soil and groundwater impacts.

Soil impacts above the COGCC Table 915-1 protection of groundwater soil screening levels were observed in two of the 15 soil borings. The soil data are illustrated and summarized in the attached tables and figures.

Impacted soils at the Beeler tank battery location will be removed via excavation. The excavation extent will be based on the location and depths of residual impacts observed during the site investigation. Noble will request closure under the COGCC Table 915-1 Protection of Groundwater Soil Screening levels following laboratory analysis showing unimpacted soils in the excavation sidewalls and floor in the area encompassing the residual soil impacts.

5.0 REMARKS

The discussion and conclusions contained in this report represent our professional opinions. These opinions are based on currently available information and are arrived at in accordance with currently accepted hydrogeologic and engineering practices at this time and location. Other than this, no warranty is implied or intended.

Figure 1 consists of two schematic diagrams of an experimental arena. Diagram (a) shows a top-down view of a rectangular arena with a dashed border. A solid black line represents the start area, and a solid black circle represents the goal area. The arena contains several obstacles: a large black circle, a smaller black circle, and a black rectangle. The start area is labeled 'START' and the goal area is labeled 'GOAL'. Diagram (b) shows a top-down view of a rectangular arena with a dashed border. A solid black line represents the start area, and a solid black circle represents the goal area. The arena contains several obstacles: a large black circle, a smaller black circle, and a black rectangle. The start area is labeled 'START' and the goal area is labeled 'GOAL'. A north arrow is located in the bottom right corner of the figure.

Figure 1 is a map of the study area. It shows a large rectangular area with a dashed border, representing the study site. Within this area, there are several smaller rectangular areas, each representing a study plot. The plots are labeled with numbers: 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100. A star is located in the lower right corner of the study site, indicating the location of the study site. A north arrow is located in the upper right corner of the map. A scale bar is located in the lower left corner of the map.

S2 Work Order# 2205049

Client: Fremont Client Project ID: Noble-Becker 22-12,13

Shipped Via: H.D./P.U./FedEx/UPS/USPS/Other_____ Airbill #:

--	--	--	--	--

Matrix (Check all that apply)	Air	Soil/Solid	Water	Other
-------------------------------	-----	------------	-------	-------

Temp ($^{\circ}\text{C}$) 6.2 Thermometer # 1

	Yes	No	N/A	Comments (if any)
If samples require cooling, is the temperature $< 6^{\circ}\text{C}$ ⁽¹⁾ ? NOTE: If samples are delivered the same day of sampling, this requirement is met if there is evidence that cooling has begun.	—			on ICE
Were all samples received intact ⁽¹⁾ ?	—			
Was adequate sample volume provided ⁽¹⁾ ?	—			
If custody seals are present, are they intact ⁽¹⁾ ?	—			
Are samples due within 48 hours present?		—		
Are water samples with short hold times present? Note the short hold analysis in the comments column - pH, Nitrate/Nitrite, Ferrous Iron (Fe^{2+}), Hexavalent Chromium (Cr^{6+} , Cr VI), COD/BOD, Total Coliform, E. Coli, Total Residual Chlorine (TRC), Dissolved Oxygen			—	
Is a chain-of-custody (COC) form present and filled out completely ⁽¹⁾ ?	—			
Does the COC agree with the number and type of sample bottles received ⁽¹⁾ ?	—			
Do the sample IDs on the bottle labels match the COC ⁽¹⁾ ?	—			
Is the COC properly relinquished by the client w/ date and time recorded ⁽¹⁾ ?	—			
For volatiles in water – is there headspace present? If yes, contact client and note in narrative.			—	
Are samples preserved that require preservation (excluding cooling) ⁽¹⁾ ? Note the type of preservative in the comments column – HCl, H_2SO_4 , NaOH, HNO_3 , etc.			—	
If samples are acid preserved for metals, is the $\text{pH} \leq 2$ ⁽¹⁾ ? Record the pH in Comments.			—	
If dissolved metals are requested, were samples field filtered?			—	
<u>Additional Comments (if any):</u>				
⁽¹⁾ If NO, then contact the client before proceeding with analysis and note in case narrative.
