COMMENTS:

UGC has been preparing this well to return to production but due to lack of manpower and equipment, we have been delayed. We request that the MIT date be pushed back till the end of the year. The latest bradenhead test (performed on 9/13/2022) shows stable tubing and production casing pressures and no bradenhead pressure. The annual bradenhead test for 2021 was the same. This well, in its current state, shows no pressure swings or influxes of fluids and has been stable throughout the monthly and annual bradenhead testing. This well will be monitored for pressure swings, influxes of fluids and monthly bradenhead tests to ensure we don't have any issues. Based on the bradenhead tests, monthly and annual, this well has mechanical integrity and poses no risk to health, safety, welfare, and the environment and wildlife resources. This plans for this well is to return it to production as soon as possible. If we cannot return to production before the end of the year, an MIT will be performed prior to 12/31/2022.
