COMMENTS:

This well started mitigation in September 2019. The bradenhead test conducted 09/05/2019 (Form 17 doc# 402170402) reported 185 psi. In the previous 6 months of bradenhead drawdown mitigation, Extraction has not seen consistent progress with this well's pressure but believes that it would benefit from an additional round of drawdown through the fugitive gas destruction device set at the wellhead. Liquid production from the bradenhead has caused complications with the fugitive gas destruction device, the device has a kill switch to protect it from getting liquid inside of it. A KO is set before the unit to try and alleviate these complications. Pressure trend over the last 6 months is attached. The bradenhead test conducted 10/13/2022 (Form 17 doc # 403198008) reporting 94 psi, indicates additional mitigation is needed. No flowrate could be recorded due to fluid. Samples were taken during the recent bradenhead test and the results will be reported on the next sundry. Extraction is confident in the efficacy of the current mitigation program and is requesting that this mitigation plan be extended for an additional 6 months.

Description

1. Operator shall implement measures to control venting, to protect health and safety, and to ensure that vapors and odors from well operations do not constitute a nuisance or hazard to public welfare.
2. Bradenhead gas is not to be vented to the atmosphere; any gas from the Bradenhead will be routed to the specified abatement system. Shut in bradenhead pressure shall not exceed 50 psig. Operator shall implement measures to get an estimate of the gas flow rate and/or volume from the bradenhead.
