COMMENTS:

This well started mitigation in May 2020. The bradenhead test conducted 05/26/2020 (Form 17 doc# 402407417) reported 200 psi. For the past 6 months this well has been hooked into a near wellhead fugitive gas removal (FGR) unit. Highpoint has seen periods of sustained pressure below the threshold mixed with pressure spikes. Fluid from the Bradenhead is a mixture of gas and viscous liquid that over time bridges off in the regulator and shuts off flow to the FGR unit. To combat this, we have added this well to our monthly blowdown/cleanout list to clear out the clogged lines; this will be done in addition to the use of the FGR unit. The charts attached show evidence of the clogging in the lines. The bradenhead test conducted 10/21/2022 (Form 17 doc # 403208827) reporting 117 psi. No flowrate could be recorded due to fluid. Sample results show the bradenhead gas is thermogenic and very similar to the production gas. Highpoint is confident in the efficacy of the current mitigation program and is requesting that this mitigation plan be extended for an additional 6 months.
