#### COMMENTS:

Due to lack of gathering lines and processing plants we are requesting a variance to flare. We produce minimal amounts of gas and the well will shut down in 2-3 days if we do not flare. The well is shut in at this time. The gas analysis has been submitted in April 2022. This gas contains less than 1 ppm of hydrogen sulfide.

#### GAS CAPTURE

##### VENTING AND FLARING:

Operation type: Flaring      Operational phase requiring venting/flaring: Production

Reason for venting/flaring: Gathering Line Not Accessible

Describe Other reason for venting/flaring:

The facilities in the area have permanently shut down. There are not existing gathering lines nearby at this time.

Describe why venting or flaring is necessary. If reporting per Rule 903.b.(2), 903.c.(3).C, or 903.d.(2), include the explanation, rationale, and cause of the event:

Due to the lack of gathering lines and processing plants in the area we need to flare the minimal amount produced. There is not enough gas production to push it down a gathering line. This well needs 0 pressure to stay running so that prevents us from holding the gas.

Describe how the operation will protect and minimize adverse impacts to public health, safety, welfare, the environment, and wildlife resources. If reporting per Rule 903.d.(2), include BMPs used to minimize venting on the BMP Tab:

Beeman Oil & Gas installed a Cimmaron 24" ECD combuster in 2019. These have a 99% efficiency rating. The site has fencing and all storm water management is up to date.

Total volume of gas vented or flared: 2 mcf ☒ estimated ☐ measured

Total duration of emission event: 12 hours ☒ consecutive ☐ cumulative

Submit a single representative gas analysis via Form 43 to create a Sample Site Facility ID# for this Location. Reference the Form 43 document number on the Related Forms tab.

Sample Site Facility ID#: \_\_\_\_\_

#### GAS CAPTURE PLAN

Describe the plan to connect to a gathering line or beneficially use the gas; include anticipated timeline:

At this time there is no plan due to no services available in the area.

A Gas Capture Plan that meets the requirements of Rule 903.e is attached. ☒

#### CASING PROGRAM

#### POTENTIAL FLOW AND CONFINING FORMATIONS

#### H2S REPORTING

☐ Intentional release of H2S gas due to Upset Condition or malfunction.

☐ Intent to temporarily abandon well with potential H2S concentration >100 ppm.

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

**Gas Analysis Report must be attached.**

H2S Concentration: \_\_\_\_\_ in ppm (parts per million)
