Impacted?	Impacted Media	Extent of Impact	How Determined
Yes	SOILS	See attached data.	Soil Samples/Laboratory Analytical Results

## INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

This form has been prepared to summarize assessment activities conducted during the permanent removal of two aboveground storage tanks (ASTs), one produced water vessel (PWV), one emission control device (ECD), two meter houses, and two separators at the Hayes 6-1/Baines 5-1/Ludwig 25-1 Facility. Assessment activities began on May 23, 2022. Soil assessment activities were conducted in accordance with COGCC Rule 911.a. A photo log is included as an attachment.

On May 25, 2022, upon receipt of the laboratory analytical report for samples collected on May 23, 2022, historically impacted soil was discovered in the facility excavation. Laboratory analytical results indicated both AST soil samples (AST01@0.5'-WP) and AST02@0.5'-WP), separator riser sample FL01@4'-WP, and separator inlet sample SEP01-Inlet@4'-WP exceeded the COGCC Table 915-1 allowable levels for benzene, toluene, total xylenes, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 1-methylnaphthalene, 2-methylnaphthalene, and/or naphthalene. The release was reported to the COGCC in the Form 19 Initial dated May 27, 2022 (Document No. 403059186). The volume of the release is unknown. The impacted soil was excavated.

## PROPOSED SAMPLING PLAN

### Proposed Soil Sampling

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Between May 23 and July 6, 2022, soil samples were collected from the ASTs, PWV, ECD, meter houses, separators and ancillary piping (see Figure 1). The soil samples were field screened for total volatile organic compounds using a photoionization detector (PID). Based on PID readings, select soil samples were submitted for laboratory analysis in accordance with COGCC Rule 911.a. The impacted soil was excavated. Analytical results indicated soil was in full compliance with Table 915-1 standards, or within the analytical variability of the background samples x 1.25, at the extents of the excavation. Therefore, further excavation was not warranted. The PID readings and soil sample results are summarized in Tables 1 and 2, respectively. The laboratory reports are attached.

### Proposed Groundwater Sampling

Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

### Proposed Surface Water Sampling

Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

### Additional Investigative Actions

Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):
