Commission

Department of Natural Resources

Loc:325172 | Date: 11/16/2022

## Inspection Photos

**Photo 1.** Facing southeast toward the location and production equipment. The wellsite is located within an oxbow of the Florida River that is prone to flooding.

## Inspection Photos

**Photo 2.** Facing toward the open top tank. There has been round rock placed around the containment. The round rock is pervious and will not prevent flood water from entering underneath the steel containment. Round rock will also be easily displaced as they do not lock in place as well as angular rock. Another solution needs to be implemented.

Loc:325172 | Date: 11/16/2022

## Inspection Photos

**Photo 3.** The steel containment is not constructed per the Operator's SWMP. A 3.5 ft. shovel was placed at the containment for scale.

**Photo 4.** The steel containment is only about 4 inches below grade. The steel containment is not constructed per the Operator's SWMP.
