If samples were collected, record retention files have been purged from 2010 and older by remediation contractors and laboratory companies. As well as contractors/subcontractors and laboratory services involved in 2007 are no longer in business and/or have changed ownership, also resulting in record destruction.

See operator comments for more information regarding sampling and analysis

OPERATOR COMMENT

Please forward onto John Heil

In response to NOAV Doc# 403003375, this Supplemental Form 27 is being submitted to provide information for the PA 21-6 - incident #1 (REM# 3868) that occurred in 2007.

A database and records review was performed by TEP personnel consisting of records request from contractor and subcontractor personnel assisting with remediation of the condensate release. Additionally, TEP requested from the analytical laboratories that were used during the 2007 timeframe to research their archive folders for any data pertaining to the PA 21-6. All responses received indicated that historical documents from 2010 and older have been purged and are no longer available.

However, it was discovered from the spill response contractor on an old camera memory card, photographs of the release. Photos of any remediation on the PA 21-6 was unable to be obtained due to the timeframe of when the remediation occurred being unknown since remediation would have occurred after the frac operations were completed.

TEP is proposing to conduct a site visit to evaluate current conditions of where the release occurred and obtain confirmation sample(s). Analysis will consist of the newly implemented Table 915-1 analysis.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
