COMMENTS:

Procedure:

1. MIRU service unit, kill well.
 2. NU BOP and test.
 3. POOH 2-3/8" tubing while TUBOSCOPE/SCANNING, and inspecting tbg. Scan entire string leaving final 10-15jts of tbg in hole for tail string.
 - a. Note- condition of scanned pipe with engineer to discuss if we keep or replace tail string at final landing
 4. RIH with 4-1/2" TSBP using only YB tbg pulled from well. If necessary pickup makeup tbg that is YB, WB or new P-110
 5. Set BP at appx 4140'. (TOC – 3890')
 6. Pull casing slips and lay down parted casing.
 7. RIH latch onto fish and pull test csg
 8. Manually backoff production casing with string shot appx 1+ jt below joint of parted csg
 9. POOH with casing and lay down. (hopefully pins up; if we break at collar and come out with pins on bottom discuss possible second backoff as we have better luck with good screw in with pins up)
 10. RIH with new casing and screw back into existing casing, fully torque (appx 2650ft-lbs) pressure test csg and pull test appx 65k. Land in minimum tension (appx 55k)
 11. Pressure test casing.
 12. RIH and retrieve RBP. POOH ENTIRE STRING – including tail string, visually inspect tbg and tally
 13. RIH with production tubing while HYDROTESTING, get light tag on fill POOH to land depth appx (+/-200 rig tag). Pump tbg volume if tagged to clear tbg; Hydrotest hanger connection.
 14. RDMO Service Unit and cleanup location.
- Note – Run lower grade pipe on bottom of string. Clearly notate within daily operation activity details the makeup of the string (grade, color, depths)
- The start date is an estimate based on rig availability and the completion or other well work. The RGU 12-10-298D does not fall within High Priority Habitat and is therefore not subject to the requirements of Rule 312.

Engineer	Operator has been in communication with the engineering unit on the time period for completing repairs due to the number of wells requiring casing repairs. Due to the number wells, not all repairs would be completed within 6 months. The Operator has a dedicated rig working on casing repairs in the Ryan's Gulch area. The Operator has investigated the causal factors for the casing failures and has made operational changes. The Operator is currently seeking a variance from the COGCC on Docket# 221000272 to complete all repairs by 12/31/2023. Added OGLA rule 312 review due to rig and equipment activity	11/29/2022
