**General Comment:**

On 12/27/2022 Reclamation Specialist Trujillo inspected Laramie Energy's Shell 0797-03B location in Garfield County, Colorado.

This is also a follow-up inspection to #69620425, to document compliance for the following corrective actions:

- Stormwater
- Storage of unused equipment, or equipment not needed for production
- Labeling
- Wildlife protection BMPs

This inspection is also in response to Resolution Nos. 403203770 and 403210496 stating Corrective Actions have been completed.

The following compliance issues were observed during this inspection:

- Stormwater

Refer to the "Location" and "Stormwater" sections of this inspection report for additional details

Refer to the photo-documentation of the observed compliance issues attached to this report.

Any corrective action(s) from previous inspections that have not been addressed are still applicable.

A follow up inspection on this site will be conducted to ensure the compliance issues have been corrected to comply with COGCC rules.

**Pits:** ☐ NO SURFACE INDICATION OF PIT

**COGCC Comments**

Comment	User	Date
<p><b>STORMWATER COMMENTS</b></p> <p>Inspection #696204259 observed that BMPs to minimize erosion, degradation and sediment transport are missing or insufficient; extensive erosion degradation observed at the cut slopes of the Location resulting in substantial sediment deposition at the base of the slopes; the stormwater discharge point on the southwest end of the Location has not been constructed with a properly engineered outlet, resulting in degradation. Spill prevention and/or containment BMPs are missing or insufficient at a tote-container on the west end of the Location.</p> <p>Operator submitted Resolution #403203770, and #403210496 with documentation showing work to address the CAs including repairing erosion, broadcast seeding, application of loose straw mulch followed by "liquid amenities/Tackifier". Documents also show ditch/berm at toe of slope was also repaired.</p> <p>It was observed that the container has been removed from the Location; corrective action regarding spill prevention and/or containment BMPs are no longer applicable.</p> <p>Due to limited visibility from snow cover on the Location, Reclamation Specialist was unable to adequately conduct a stormwater inspection on the entire Location. Specifically, unable to determine if work to address the outlet on the southwest end of the Location has been conducted. However, cut slopes on the north end of the Location were visible; it was observed in this inspection that BMPs to stabilize, as well as to minimize erosion and degradation at the cut slopes are showing signs of degradation; BMPs implemented (straw mulch followed by an application of hydromulch) have not been maintained, and do not appear to be adequate for the site's conditions; erosion degradation is recurring.</p>	trujilloam	12/30/2022
