Comment:

Rule 204 provides that inspections shall be conducted at all "reasonable times" and not "... during normal business hours" as stated in the inspection report. TEP maintains that if site conditions are excessively soft and muddy, that it is not a reasonable time to conduct that inspection. As shown in the inspection photos, some operational traffic is unavoidable and is essential to safely operating, producing, and maintaining the wells and related equipment.

TEP is attempting to minimize non-critical traffic on access roads during extreme soft / muddy conditions for the

express purpose of reducing ruts and sediment tracking per COGCC Rule 1002.f.(2).F - Vehicle Tracking Control Practices. TEP is seeking cooperation from COGCC inspection staff to avoid travel on these roads during such conditions thereby preventing unnecessary rutting of the pad and access roads. TEP is requesting that discretion and good judgement be used when accessing our locations, and to defer travel until site conditions improve. This will help to minimize any additional disturbance beyond what is absolutely needed to safely conduct site operations. In accordance with TEPs storm water management program, the BMPs will be maintained and serviced as needed. This CA has been addressed.

COGCC Decision: Approved pending re-inspection
