COMMENTS:

On 1/20/2022, a Form 17 was completed with a beginning pressure of 411 psi and an ending pressure of 3 psi. Gas was present at the start of the test and continued through the 30 minute test with the last 10 minutes of the test exhibiting just a vapor. A gas sample was collected, and those results will be submitted once the lab has finished their analysis. Since the Form 17 was conducted we continue to see pressure building however it is not as high as when the test was conducted. Due to the initial high pressure and current pressure on the surface casing, we would like to add this well to our abatement program. The abatement schedule will be to perform blowdowns every 3 days for several weeks to mitigate the higher pressure. We do not believe that we have direct communication with the producing zone as our CBL's look very good.
