### INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Pursuant to COGCC Rule 911 a site investigation was conducted pertaining to the BECCA D03-11 wellhead cut and cap and flowline abandonment. Approximately 555' of flowline was abandoned-in-place. Approximately 860' of flowline was removed. The wellhead was cut and capped per COGCC rules.

### PROPOSED SAMPLING PLAN

#### Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

A grab soil sample will be collected at the base of the excavation or the area showing the highest degree of impact during field screening activities at the wellhead excavation. One grab confirmation soil sample will be collected at the wellhead excavation, and one sample collected from the flowline terminus. Soil samples were analyzed by a certified laboratory for TPH (total volatile [C6-C10] and extractable [C10-C36] hydrocarbons) organic compounds in soil per COGCC Table 915-1, EC, SAR, pH, and boron. One sample was collected for waste characterization of metals. All samples collected were analyzed by a certified laboratory using approved COGCC laboratory analysis methods.

#### Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

#### Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

#### Additional Investigative Actions

### OTHER INVESTIGATION INFORMATION

☐ Were impacts to adjacent property or offsite impacts identified?

☐ Were background samples collected as part of this site investigation?

A background sample for arsenic, barium, lead, and selenium analysis was collected. Residual metals at the site are consistent and/or less than background concentrations. Another background sample for pH and boron analysis was collected.

### REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No

#### SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

A site assessment was completed to delineate residual soil impacts at the site. Groundwater was encountered during the subsurface assessment, therefore GSSL appear applicable. Source excavation activities will be completed to remove residual impacts at the site. Noble proposes excavation soil samples be collected for TPH (C6-C36) and Table 915-1 organics analysis.

#### REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Source excavation activities will be started to remove impacts at the site by March 1, 2023. Groundwater will be monitored for natural attenuation. NFA will be considered when soil concentrations are in compliance with COGCC Table 915-1 standards, and groundwater is in compliance for four (4) consecutive quarters

### **GROUNDWATER MONITORING**

If groundwater has been impacted, describe proposed monitoring plan, including # of wells or sample points, monitoring schedule, analytical methods, points of compliance. Attach a groundwater monitoring location diagram.

Four monitoring wells were installed to delineate impacts at the site. Replacement wells will be installed as necessary, post-remediation. The wells will be sampled on a quarterly basis for BTEX, naphthalene, 1,2,4-TMB, 1,3,5-TMB, 1-methylnaphthalene, 2-methylnaphthalene, and benzo(a)-anthracene analysis. Noble requests inorganic groundwater parameters be removed from the sampling plan.
