COMMENTS:

On 1/14/2023, a pre frac Form 17 was completed with a beginning pressure of 0 psi and an ending pressure of 0 psi. A gas sample was not collected. We installed automated pressure gauges on the well 1/21/23. Not long after the gauge was installed we began to see pressure on the well. Since the Form 17 was conducted we have conducted 4 blowdowns, the first on 1/25/23 and 3 blowdowns following that. Pressure is currently at 189 psi and climbing. Due to the current pressure on the surface casing, we would like to add this well to our abatement program. The abatement schedule will be to perform blowdowns every couple of days utilizing our abatement truck to mitigate the pressure. The expectation is that we have a finite volume of gas and as we bleed off pressure through our abatement process the pressure will continue to decrease. We do not believe that we have direct communication with the producing zone as our CBL's look very good but we will use this abatement to relieve pressure and further diagnose the source of the pressure. Below is the pressure plots since we have installed automation.
