GAS CAPTURE

VENTING AND FLARING:

Operation type: Flaring Operational phase requiring venting/flaring: Production

Reason for venting/flaring: Gathering Line Not Accessible

Describe Other reason for venting/flaring:

Submitting form for gas capture plan.

Describe why venting or flaring is necessary. If reporting per Rule 903.b.(2), 903.c.(3).C, or 903.d.(2), include the explanation, rationale, and cause of the event:

This location is 17 miles from the nearest gas gathering line and is uneconomic to build one. Operator is requesting a variance and proposes a plan to utilize all produced gas on the existing facility.

Describe how the operation will protect and minimize adverse impacts to public health, safety, welfare, the environment, and wildlife resources. If reporting per Rule 903.d.(2), include BMPs used to minimize venting on the BMP Tab:

Gas produced from location will be captured and utilized to power existing facilities.

Total volume of gas vented or flared: 0 mcf ☒ estimated ☐ measured

Total duration of emission event: 0 hours ☐ consecutive ☒ cumulative

Submit a single representative gas analysis via Form 43 to create a Sample Site Facility ID# for this Location. Reference the Form 43 document number on the Related Forms tab.

Sample Site Facility ID#: _____

GAS CAPTURE PLAN

Describe the plan to connect to a gathering line or beneficially use the gas; include anticipated timeline:

Request to approve gas capture utilization to supply energy for the production of the wellsite: absolutely no venting or flaring will be occurring. Please see attached gas capture utilization plan and cover letter. We believe the plan comports with the rules, and the spirit of the rules which is to eliminate methane emissions.

The well is far enough from gas gathering lines to make it uneconomical to reach tie-in points. The location runs a deficit in terms of gas produced versus gas required to run the equipment. This deficit is managed by controlling separator temperature and supplementing pumpjacks with propane when required.

There will be no flaring or venting at any of these sites.

A Gas Capture Plan that meets the requirements of Rule 903.e is attached. ☒

H2S REPORTING

☐ Intentional release of H2S gas due to Upset Condition or malfunction.

☐ Intent to temporarily abandon well with potential H2S concentration >100 ppm.

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.

H2S Concentration: _____ in ppm (parts per million)

Date of Measurement or Sample Collection _____

Description of Sample Point:

Absolute Open Flow Potential _____ in CFPD (cubic feet per day)

Description of Release Potential and Duration (If flow is not open to the atmosphere, identify the duration in which the container or pipeline would likely be opened for servicing operations.):

Distance to nearest occupied residence, school, church, park, school bus stop, place of business, or other areas where the public could reasonably be expected to frequent: _____

Distance to nearest Federal, State, County, or municipal road or highway owned and principally maintained for public use: _____
