Other(Specify):

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

While conducting maintenance operations on a separator approximately 1.25 bbls of crude oil were released to the ground surface outside of containment. The impacted soil will be removed following utility locates. Confirmation soil samples will be collected and submitted for laboratory analysis. Due to the release being strictly crude oil in nature, HighPoint requests to amend the 915-1 sampling and analysis plan to only include Organics (TPH C6-C36) and BTEX.

Was spill/release completely contained within berms or secondary containment? <u>NO</u> Was an Emergency Pit constructed? <u>NO</u>			
<i>Secondary containment, <b>including walls &amp; floor regardless of construction material</b>, must be sufficiently impervious to contain any discharge from primary containment until cleanup occurs.</i>			
<b>A Form 15 Pit Report shall be submitted within 30 calendar days after the construction of an emergency pit</b>

Surface Area Impacted: Length of Impact (feet): _____		Width of Impact (feet): _____	
Depth of Impact (feet BGS): _____		Depth of Impact (inches BGS): _____	
How was extent determined?			
The extent of impacts will be determined through excavation of impacted soil above COGCC standards. Water well permit 240495 has a static water level of 70' below ground surface. Due to the surficial nature of the spill and the depth to groundwater, Highpoint proposes using COGCC Table 915-1 residential soil screening levels.
