Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

While conducting maintenance operations on a separator approximately 1.25 bbls of crude oil were released to the ground surface outside of containment. The impacted soil will be removed following utility locates. Confirmation soil samples will be collected and submitted for laboratory analysis. Due to the release being strictly crude oil in nature, HighPoint requests to amend the 915-1 sampling and analysis plan to only include Organics (TPH C6-C36) and BTEX.

Environmental	Based on the information presented, it appears that no further action is necessary at this time and the COGCC approves the closure request. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or if groundwater is found to be impacted, then further investigation and/or remediation activities may be required.	02/07/2023
