COMMENTS:

The current well classification is Oil Well. We request the classification changed to Observation Well. The Rangely Weber Sands Unit is an enhanced recovery field in which we are utilizing TA wells as monitor wells for pressure observation of the reservoir . We monitor bottom hole pressure in the Weber formation to help manage our CO2 flood. The wells are isolated with closed valves on the wellhead, disconnected flowline, and an isolation packer and tubing plug. We maintain mechanical Integrity and perform routine MIT's per the rule. The well will be reported with a well status of AC on the Form 7. We get a bottom hole pressure survey via wireline. Pressure readings are taken at a minimum of every 5 years and as frequent as annually. There is profile nipple at 5893 ft with a tubing plug set in it. There is a packer protecting the casing set at 5908 ft.
