Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

on 9/24/2021, a pumper from Caerus was working at the D24W pad and notified Summit personel of a possible gas release at approximately 18:35. Summit Operations investigated, but could find no finite evidence of a leak. Out of caution, the line was blown down, shut in, and locked out. Summit Operations further investigated on 9/27/2021 by repressurizing the line, and using a FLIR camera to identify whether a leak was present, and if it was on the Caerus wellpad, or on Summit's gathering line. A leak was found on Summit's line, which was promptly blown down, shut in, and locked out again. Summit will excavate the line to determine the extent of the leak and any impacts to the soil.

Describe Incident & Root Cause (include specific equipment and point of failure)	
A pumper from Caerus was working at the D24W pad and notified Summit personnel of a possible gas release. Summit utilized a FLIR camera to identify and verify the leak on the gathering line. The root cause was due to corrosion of the line.	
Describe measures taken to prevent the problem(s) from reoccurring:	
The preventative measures taken included removing the previously piggable line and replaced the damaged section with flex pipe and tied the line into the G23W which is a piggable line.

Description

	Based on review of information presented it appears that no additional spill reporting via the Form 19 is necessary at this time, and COGCC approves the closure request. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or if surface and/or ground water is found to be impacted, then further investigation and/or remediation activities will be required at the site.
