Based on the information provided herein, this Application for Site Investigation and Remediation Workplan complies with COGCC Rules and applicable orders and is hereby approved.

**COA Type****Description**

	A pH and SAR soil sample at the vault exceeds the Table 915-1 soil suitability levels for reclamation. The extent is limited, likely not in the plant root zone, and the extent delineated; therefore, the limited area and depth of exceedances should not negatively affect plant growth. COGCC will not require further action at this time. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or exceeding background levels, then further investigation and remediation/reclamation activities may be required.
	This no further action determination is contingent on implementation of the approved reclamation plan.
	Based on the information presented, it appears that no further remedial action is necessary at this time and the COGCC approves the closure request. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or if groundwater is found to be impacted, then further investigation and/or remediation activities may be required.  The surface area disturbed by the remediation activity shall be reclaimed in accordance with the 1000 Series Reclamation Rules. For locations with active ongoing oil and gas operations, comply with Rule 1003 interim reclamation requirements and for locations that will no longer have active oil and gas operations, comply with Rule 1004 Final Reclamation requirements.
	The pH and SAR of soil samples collected at the Location exceeds the allowable level for Table 915-1 soil suitability for reclamation for pH and SAR. Therefore, Operator will define the extent of soil with elevated pH and SAR, and if Operator proposes to leave soil with elevated pH and SAR in place, Operator will submit a Reclamation plan pursuant to Rule 915.b.
	COGCC approves the Operator's request to use Table 915-1 residential soil screening levels.
