Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

**COA Type****Description**

	Operator shall include photo documentation of the surface areas, buried tank excavation and sample locations on the subsequent Supplemental Form 27.
	If any volume of impacted soil is discovered or removed during the removal of the buried vessel, the extent of impact must be defined and samples must be collected in accordance with Rule 910.b.(3). At a minimum sufficient soil samples shall be retained for laboratory analysis to define the horizontal and vertical extent of impacts to soil. Soil samples will analyze soil samples for TPH (C6-C36), Table 915-1 Organic Compounds in Soil, Table 915-1 metals, and Table 915-1 Soil Suitability for Reclamation (Electrical conductivity, Sodium adsorption ratio, and pH by saturated paste method, boron (hot water soluble)).
	Proposed soil samples shall be collected at a depth to ensure samples are representative conditions of in-situ soil beneath the backfill of excavations conducted during removal of the former equipment.
	Upon removing any buried tank, at a minimum, Operator will submit one sample per tank for laboratory analysis pursuant to Rule 915. Operator will submit a sample from an area exhibiting the highest degree of impact, or in the absence of apparent impacts from the area directly below the service hatch, where a load out valve was connected to the tank, or where subsurface piping connected to the tank at the surface. Operator will provide photographs of the bottom of the tank and the footprint after removal.
