Re: West Fork Unit  
Washington County, Colorado

Dear Sir;

On August 7, 1985 Mechanical Integrity Tests were conducted on your water injection wells in the West Fork Unit. Of the five wells tested, three met our pressure test portion of the MIT requirements. They are the West Fork Unit #2, West Fork Unit #12, and West Fork Unit #16. Please submit your completed well integrity forms for the three wells as soon as possible. The West Fork Unit #4 and West Fork Unit #8 failed our test and require remedial action. We will allow you to continue injection into these wells as long as measures to correct the problems are undertaken in the near future. We will contact you to confirm your schedule for repairs. Upon completion of the remedial work we wish to be notified by Sundry Notice of the problems found and the actions taken to rectify the situation. If a delay should occur in which remedial action is postponed for an indeterminate time we should be contacted immediately to determine subsequent requirements. In addition, once repairs have been finalized please notify us so we can schedule another mechanical integrity test.

Also during my August 7th inspection, we were unable to obtain an acceptable pressure test on the Centennial Landaker #1, West Fork Field. This situation needs to be resolved. Injection may continue on a temporary basis with the stipulations that

Mr. Gary Chavez

Page 2

by September 30, 1985:

- 1) An application is submitted
- 2) A satisfactory mechanical integrity test is performed
- 3) All back Form 14 reports are submitted from the time injection commenced

Failure to comply with any of the stipulations will warrant shutting the well in until our requirements are met.

If you have any questions or need clarification as to what we require, please feel free to contact me or Ed DiMatteo.

Very truly yours,

*L Robbins* <sub>ED</sub>
