DLO. OIL & GAS CONS. COMM.

Form 2
Conoco State 16 No. 1
Feb. 12, 1985
Page Two

A BOP will be installed and tested periodically. Minimum pressure specifications will be 1,500 psi. A fresh-water, low solids, non-dispersed to lightly dispersed mud system will be used. Sufficient mud weight and viscosity will be maintained to assure control of the well and sufficiently clean the hole. In the event a salt section is encountered, a salt water gel mud system will be used.

Application was made for an exception location in our letter dated 2/6/85 to Mr. William Smith.

The acreage involved in this lease has been farmed in from Quinoco and Amoco. Conoco has obtained the right to operate all formations below the "J" sand in Section 16.
