Photo 1: Photos taken from the Location entrance. Photo shows Operator appears to have re-graded the working pad- regrading alone is inadequate to provide long-term stabilization, minimization of degradation, tracking and off-site sediment transport, and is considered a temporary repair measure.

Photo 2: Photo taken from the access road entrance. Photo shows Operator has implemented a single row of “reusable trackout control mats”. BMP is not per good engineering practices, and is inadequate in length to allow for at least an entire tire rotation for most off-highway, or industrial vehicle tires used in O&G.
