General Comment:

On 4/5/2023, Reclamation Specialist Trujillo inspected TEP Rocky Mountain's Bosely-67S96W 34SENE Location in Garfield County, Colorado.

This inspection is a follow-up to #696204716 to document compliance with the follow corrective actions:

- Debris (wildlife carcass)
- Stormwater

It was observed in this inspection that, though work has been taken to address the stormwater compliance issues, BMPs remain inadequate.

Refer to the "Location" and "stormwater" sections of this inspection report for additional details.

Refer to the photo-documentation of the observed compliance issues attached to this report.

Any corrective action(s) from previous inspections that have not been addressed are still applicable.

A follow up inspection on this site will be conducted to ensure the compliance issues have been corrected to comply with COGCC rules.

Comment	User	Date
<p>STORWMATER COMMENTS</p> <p>Inspection #696204716 observed that BMPs to stabilize the working pad, and to minimize degradation, tracking and off-site sediment transport are missing or insufficient.</p> <p>It was observed in this inspection that Operator appears to have re-graded the working pad- regrading alone is inadequate to provide long-term stabilization, minimization of degradation, tracking and off-site sediment transport, and is considered a temporary repair measure.</p> <p>It was also observed that Operator has installed a single row of "reusable trackout control mats". Staff commends Operator for the implementation of the VTC, however BMP does not appear to have been installed per good engineering practices, and is inadequate in length to allow for at least an entire tire rotation for most off-highway, or industrial vehicle tires used in O&G.</p> <p>A new CA date is being provided for the implementation of long-term stormwater and erosion control measures to stabilize the working pad, and to minimize degradation, tracking and off-site sediment transport in accordance with good engineering practices.</p>	trujilloam	04/06/2023
