Photos 3 & 4. Taken from the northeast corner of the pad. Photo illustrates that no apparent sediment laden stormwater has exited off location (left) and that the Operator appears to have backfilled the eroded areas and installed straw wattles as a BMP for the location (right).

Photo 5. It does not appear the straw wattles were installed per good engineering practices as they were not trenched in. Sheet flow of water could potentially run directly underneath the straw wattles if not installed properly.
