## COMMENTS:

Crestone Peak Resources Operating LLC has reviewed the COGCC Operator Guidance, "Mechanical Integrity Test Guidance: Practices and Procedures". Crestone previously conducted an economical production test as reported on previous sundries. (Doc ID: 402575694 and 402719396). Crestone is reviewing options for gas sales line takeaway which includes bringing these wells on production permanently. Crestone would like to propose demonstrating mechanical integrity by alternative means. Crestone believes that the cement bond log and the most recent bradenhead tests can be utilized to demonstrate mechanical integrity by alternative means.

The Grimm 34 4H first came online in November 2012. The most recent bradenhead test for the well had an initial bradenhead pressure of 0 psi on October 25th, 2022. No mitigation is necessary. During this test, no communication or pressure drop was observed in the tubing or production casing. The previous three (3) years of testing also had Bradenhead tests of 0 psi. The surface casing was cemented from 2,135' to surface with 690 sacks and has adequate coverage. Utilizing the Aquifer Determination tool, the fox hills base is at 1,919' and the Denver base is at 798'. Both are adequately covered by the surface casing and cement. Crestone would like to respectfully request that the bradenhead test and cement information be utilized to demonstrate mechanical integrity by alternative means. Crestone intends to RTP this well in Q2/2024.
