## Site Investigation and Remediation Workplan (Initial Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

### **Other Potential Receptors within 1/4 mile**

Surface water is present in the area in the form of ephemeral streams and small reservoirs. The closest surface water feature to the site is an unnamed ephemeral drainage to the Smoky Hill River. The Smoky Hill River is an ephemeral drainage to Cedar Bluff Reservoir, which is a perennial water body. The unnamed drainage feature is approximately 635 feet to the east of the well site and the Smoky Hill River is approximately 2,109 feet to the north of the well site. The closest perennial water body is Cedar Bluff Reservoir which is more than 118 miles downstream of the site. This site is located within the extents of the Colorado Parks and Wildlife (CPW) High Priority Habitat (HPH) designated for Winter Concentration Area and Severe Winter Range for Mule Deer.

## REMEDIAL ACTION PLAN

### SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

### REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Remediation activities for substantial impacts, if required, will likely involve the excavation of impaired soils for transport to an approved disposal facility. Following excavation and removal of any impacted soils, confirmation sampling will be conducted to confirm successful remediation. Excavated areas will then be backfilled with clean soil as necessary and seeding of the remediated area to re-establish a proper seedbed will be conducted.
