**General Comment:**

On 4/10/2023, Reclamation Specialist O'Malley conducted an interim reclamation and stormwater inspection at TEP Rocky Mountain LLC's JOLLEY-66S91W/16NWSW Location #335447 in Garfield County, Colorado.

The following compliance issues were observed during this inspection:  
- Stormwater: cut and fill slopes and working pad not stabilized

Refer to the "Reclamation" and "Stormwater" sections of this inspection report for additional details.

Refer to the photo-documentation of the observed compliance issues attached to this report.

Any corrective action(s) from previous inspections that have not been addressed are still applicable.

A follow up inspection on this site will be conducted to ensure the compliance issues have been corrected to comply with COGCC rules.

1003 f. Weeds Noxious weeds? P

Comment Areas of the location not needed for production have been reduced and reclaimed. Interim areas appear vegetated with introduced (crested wheatgrass, thinopyrum sp.) and native (bluebunch wheatgrass) perennial grasses. No noxious weed concerns observed at the time of this inspection. However, full vegetation assessment and definitive species identification was not possible due to dormant season. A follow up inspection will be conducted during a future growing season to determine compliance with 1003 requirements.

Corrective Action: _____	Date _____
Overall Final Reclamation _____	Well Release on Active Location <input type="checkbox"/> Multi-Well Location <input type="checkbox"/>

  

**Storm Water:**

Loc Erosion BMPs	BMP Maintenance	Lease Road Erosion BMPs	Lease BMP Maintenance	Chemical BMPs	Chemical BMP Maintenance	Comment
Gravel		Gravel				
Retention Ponds						
Compaction		Compaction				
Seeding						Insufficient to stabilize slope
		Ditches				

  

**Comment:** It was observed in this inspection that stormwater and sediment control BMPs are missing/insufficient:  
 - Pad shows signs of lack of stabilization BMPs, as is evidenced by the presence of ruts. Tracking control BMPs to minimize/mitigate tracking and offsite sediment transport are missing or insufficient.  
 - The cut slope is unstabilized. Lack of stabilization and resulting undercutting appears to be impacting vegetation areas above and migrating backwards/upslope as is evidenced by eroded/pedestaled vegetation at the top of the slope. Previous inspection #700703340 and #700702662 also observed the cut showing signs of lack of stabilization.  
 - The western interim area is not stabilized; rill erosion observed in multiple areas.

**Corrective Action:** Install or repair required BMPs per Rule 1002.f. Continue to monitor and manage stormwater on the Location. Ongoing stormwater management is required until the site receives a passing final inspection.

**Date:** 04/17/2023

  

**Pits:** ☒ NO SURFACE INDICATION OF PIT
