Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

A compromised oil inlet valve on a vertical heater resulted in approximately 7 bbls of oil being released to the ground surface. Upon discovery, the vessel was shut-in and hydro vacs were immediately dispatched to remove the impacted soil. Confirmation soil samples will be collected and submitted for laboratory analysis. Due to the release being strictly oil, Bonanza Creek proposes to amend the Table 915-1 analysis plan to only include TPH C6-C36 and organics.

Other (specify)

Type of Equipment at Point of Spill/Release: Vertical Heater Treater

If "Other" selected above, specify or describe here:

Describe Incident & Root Cause (include specific equipment and point of failure)

A compromised oil inlet valve on a vertical heater resulted in approximately 7 bbls of oil being released to the ground surface.

Describe measures taken to prevent the problem(s) from reoccurring:

Routine AVO inspections occur at all oil and gas facilities. Bonanza lease operators conduct routine facility walkthroughs and inspections. If equipment appears to be compromised, they should immediately be replaced.
