Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Impacts will be assessed per rules 911.b

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Soil samples will be collected spill pathway area, near the former well head location, former separator location, former onsite flowline locations, and any other potentially impacted areas determined by field observations and field screening. At least seven grab samples will be collected from the pad. All soil samples will be analyzed for the complete list of contaminants of concern as outlined in COGCC Table 915-1. At least one background sample will be collected from an adjacent, upgradient or cross-gradient, unaffected area. The background sample will be analyzed for EC, SAR, pH, boron, metals, chloride. Proposed sampling locations are shown in figures with accompanying report.

Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Additional Investigative Actions

☐ Additional alternative investigative actions described in attached Site Investigation Plan (summary):

Further investigation was completed during remediation activities. The attachment narrative report summarizes all investigation and remediation activities.

Was extent of groundwater contaminated delineated? No

ND Highest concentration of Toluene (µg/l)

Depth to groundwater (below ground surface, in feet)

ND Highest concentration of Ethylbenzene (µg/l)

Number of groundwater monitoring wells installed

ND Highest concentration of Xylene (µg/l)

Number of groundwater samples exceeding 915-1

NA Highest concentration of Methane (mg/l)

Surface Water

0 Number of surface water samples collected

Number of surface water samples exceeding 915-1

If surface water is impacted, other agency notification may be required.

OTHER INVESTIGATION INFORMATION☐ Were impacts to adjacent property or offsite impacts identified?☒ Were background samples collected as part of this site investigation?

A background sample was collected northwest of the pad location in undisturbed soil. The sample was analyzed for EC, SAR, pH, Boron, and Metals.

☐ Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards)

Volume of liquid waste (barrels)

☐ Is further site investigation required?**REMEDIAL ACTION PLAN**

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? Yes

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

All impacted soils were removed via dig and haul from the site tank battery, separator, wellhead, and flow line areas and transported to Moffat County Landfill for disposal.

REMEDIAL SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

The attachment narrative report summarizes all investigation and remediation activities.

OPERATOR COMMENT

As indicated on the previous Form 27 Supplemental Report (Doc# 402977463), the COGCC requested a COA to "proceed with sampling in REM 20666 under the Groundwater Protection standards, this will be revalued after all excavation and sample results are received. If no ground water in encountered, the operator may again request the Residential Soil standards." Due to the absence of groundwater during investigation and remediation activities, Gulfport requests to use Residential Soil Screening Levels (RSSL) for site evaluation. Gulfport respectfully requests closure of remediation project # 20666.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.

COA Type**Description**

	The surface of this location appears to be State surface, the operator shall comply with COGCC Reclamation Rules.
	Based on review of information presented it appears that no further action is necessary at this time, and COGCC approves the closure request. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or if groundwater is found to be impacted, then further investigation and/or remediation activities may be required at the site.
