**RE: Facility Closure Assessment
Wilson Creek Unit 31
COGCC Remediation Project Number 20334
Rio Blanco County, Colorado**

Ms. Puechner,

Entrada Consulting Group, Inc. (Entrada) has prepared this Closure Summary for Chevron USA Inc., (Chevron) related to the facility closure activities conducted at the Wilson Creek Unit 31 production pad (Site) located in Rio Blanco County, Colorado. The Site is in the southwest quarter of the northeast quarter in Section 2, Township 2 north, Range 94 west, of the 6th Principal Meridian. The coordinates in decimal degrees of the approximate center point of the Site are 40.172194° latitude and -107.905431° longitude. The Colorado Oil and Gas Conservation Commission (COGCC) Location ID for the Site is 314497.

Entrada was contracted to conduct field screening and collect soil samples during facility closure activities at the Site in accordance with the sampling plan submitted in the approved Form 27 Initial (Document Number 402806511). All investigation activities, field screening, and sampling activities discussed herein were conducted in accordance with COGCC 900 Series Rules and associated COGCC operator guidance documents.

SITE DESCRIPTION AND PATHWAY TO GROUNDWATER EVALUATION

The Site is located on a north facing hillside composed of weathered fine grained low-permeability shale and is situated at an elevation of approximately 7,975 feet above mean sea level (ft-amsl). The nearest surface water feature is an ephemeral tributary to Strawberry Creek which is located approximately 0.45 miles northwest of the Site at an elevation of approximately 7,465 ft-amsl (510 feet below the Site). There are no groundwater wells within 1.00 mile of the Site actively permitted with the Colorado Division of Water Resources (DWR). Numerous groundwater wells are present within 1.5 miles of the Site however, the majority of those being monitoring wells located in valley base in and around the Wilson Creek Central Production Area

and are associated with COGCC Remediation Project Number 70. A selection of representative monitoring wells that list static depths to water at the time of well construction are summarized in the table below.

DWR Permit Number	Date Installed	Approximate Surface Elevation (ft-amsl)	Static Depth to Ground water (ft-bgs)	Approximate Groundwater Elevation (ft-amsl)	Elevation Difference Between Unit 31 Ground Surface* and Reported Static Groundwater (feet)
12707	8/12/1961	8,021	170	7,851.00	124.00
46610	6/17/2004	7,994	62.65	7,931.35	43.65
9284	7/6/1961	7,595	40.00	7,555.00	420.00

* Elevation information recorded using Google Earth

The information presented above indicates that a pathway to groundwater is not expected at the Site.

FIELD SCREENING AND SOIL SAMPLING ACTIVITIES

On November 8, 2021, December 1, 2021, May 23, 2022, June 6, 2022, August 4, 2022, August 10, 2022, and August 25, 2022, an Entrada representative was onsite to field screen and collect soil samples from the wellhead and flowline excavations. A weathered shale bedrock/soil mix was generally encountered during excavation activities at depths ranging from 4 to 12 ft-bgs. In total, soil was field screened at thirty-one locations: twenty-two points from the excavation's sidewalls and nine points from the excavation bases. Groundwater was not observed at any point during field activities. Soil from each of these locations was visually examined for evidence of potential environmental impacts (e.g., petroleum staining and odor) and screened for volatile organic compounds. Screening was conducted by placing the soil into a re-sealable bag, allowing the soil to warm and volatilize any organic compounds, and monitoring the headspace in the bag with a photoionization detector (PID) equipped with a 10.6 eV lamp. The maximum PID reading observed during the investigations was 180.2 parts per million (ppm) at Unit 31 N (4-6') point in the initial wellhead excavation.

During the May 23, 2022 excavation sampling event, analytical results from two locations, the south sidewall sample Unit 31 SW (9') and the west base sample Unit 31 BW (12'), were above the COGCC Table 915-1 standard for total petroleum hydrocarbons (TPH). Analytical results from a third location, the east base sample Unit 31 BE (14'), was above the Table 915-1 arsenic standard. A thin layer of soil was subsequently removed and a confirmation sample Unit 31 BE (14') was collected on August 25, 2022. Analytical results from this event indicated that the arsenic impacted soil had been adequately removed. The northern base of the excavation was not completed and ready for confirmation sampling during this event.

Additional soil and rock were removed from the southern wall of the excavation on June 16, 2022 and confirmation soil samples were collected. Subsurface impacts appeared to follow the weathered shale bedrock which trended shallower as the excavation moved towards and into the access road. The Unit 31 BSW (8') sample was collected from the base of the south sidewall expansion and was intended to show that vertical impacts, previously identified in the area, had been adequately removed. Analytical results from the south sidewall sample Unit 31

SW (4') continues to be above the Table 915-1 standard for TPH. Additional soil and rock was removed from the west base of the excavation to address TPH impacts. Analytical results from sample Unit 31 BW (18') indicated that the TPH impacted soil had been adequately removed, however a slight exceedance in pH was identified. A thin layer of soil was subsequently removed and a confirmation sample Unit 31 BW (18') was collected on August 25, 2022. Analytical results from this event indicated that the pH impacted soil had been adequately removed.

On August 4, 2022, confirmation soil samples were collected from the northern portion of the excavation once remaining impacted soil had been removed. Analytical results from the south excavation sidewall Unit 31 B2 S (16') was above the Table 915-1 standard for pH. A thin layer of soil was subsequently removed and a confirmation sample Unit 31 B2 S (16') was collected on August 25, 2022. Analytical results from this event indicated that the pH impacted soil had been adequately removed.

In total, twenty-two (22) soil samples were collected from the wellhead excavation at depths ranging from 4 to 18 feet below ground surface (ft-bgs) and submitted for laboratory analysis. Six soil samples, Unit 31 BE (14') (sample and resample), Unit 31 BW (12'), Unit 31 BW (18') (sample and resample), and Unit 31 B2 (18') were collected from the wellhead excavation base. Sixteen soil samples, Unit 31 N (4-6'), Unit 31 NE (6'), Unit 31 NW (6'), Unit 31 SE (9'), Unit 31 SE2 (4'), Unit 31 SW (9'), Unit 31 SW2 (4'), Unit 31 SW3 (5'), Unit 31 E (9'), Unit 31 W (8'), Unit 31 BSW (8'), Unit 31 B2 N (16'), Unit 31 B2 S (16') (sample and resample), Unit 31 B2 E (16') and Unit 31 B2 W (16'), were collected from the excavation sidewalls. All impacts were fully delineated and removed as confirmed by analytical results.

On June 16, 2022, the remaining portion of on-location buried flowline was exposed for inspection prior to removal. During field screening activities hydrocarbon impacts were identified along the eastern section of the flowline which lies beneath the Bureau of Land Management (BLM) access road. A reference sample, Unit 31 FL2 (2') was collected from the impacted soil surrounding the flowline. Impacted soils were immediately excavated to a depth of 5 ft-bgs and confirmation samples were collected from the base and sidewalls.

In total, six (6) soil samples were collected from the flowline excavation at depths ranging from 2 to 5 ft-bgs and submitted for laboratory analysis. Two soil samples, Unit 31 FL2 (2.5') and Unit 31 FL2 (5') were collected from the flowline excavation base. Four soil samples, Unit 31 FL NSW (3.5'), Unit 31 FL SSW (2'), Unit 31 FL ESW (2') and Unit 31 FL WSW (2') were collected from the excavation sidewalls.

Two local background samples, WC BG-SP7, and WC BG-SP15 were collected from similar soil type (Jerry-Thornburgh-Rhone Complex) as the Site at depths ranging from 0 to 2 ft-bgs. These samples were collected from undisturbed native material away from potential impacts related to Site activities to characterize background conditions as part of the broader Wilson Creek Background soil survey. This survey, once finalized, will be submitted under separate cover. A summary of the data including analytical results and a sample location figure is included as an **Attachment**.

Field screening and soil sample locations are included on **Figure 1**. A photographic log and wellhead and flowline checklists documenting Site conditions during the field assessment are provided in as an **Attachment**.

SOIL ANALYSIS

All soil samples were collected in sample containers appropriate for the specified laboratory analyses, sealed, labeled, and placed into an ice filled cooler for preservation. All soil samples were submitted to Pace Analytical in both Minneapolis, Minnesota and Mt. Juliet, Tennessee and Energy Laboratories in Helena, Montana following chain-of-custody procedures and were analyzed for the following:

- Total petroleum hydrocarbons as diesel range organics (TPH-DRO) and TPH as oil range organics (ORO) by U.S. Environmental Protection Agency (EPA) Method 8015M;
- TPH as gasoline range organics (GRO) by EPA Method 8015D;
- Benzene, toluene, ethylbenzene and xylenes (BTEX), 1,2,4-trimethylbenzene and 1,3,5-trimethylbenzene by EPA Method 8260B;
- Polycyclic aromatic hydrocarbons (COGCC Table 915-1 list) by EPA Method 8270C;
- pH by EPA Method 9045D;
- Metals:
 - Arsenic by EPA Method 6020;
 - Barium, cadmium, copper, lead, nickel, selenium, silver, and zinc by EPA Method 6010B;
 - Hexavalent chromium by EPA Method 7199; and
 - Hot water-soluble boron by 6010B-NE493 Ch 2;
- Electrical conductivity (EC) by EPA Method 9050A Modified; and
- Sodium adsorption ratio (SAR) by calculation.

The background samples were analyzed for the metals listed above, EC, pH, hot water-soluble boron and SAR by the previously listed analytical methods.

SOIL ANALYTICAL RESULTS

Based on the pathway to groundwater evaluation discussed above, the COGCC Table 915-1 Residential Soil Screening Levels (RSSLs) were used to determine soil compliance. The following laboratory analytical results were reported above the applicable COGCC Table 915-1 RSSLs.

- Arsenic was reported above the Table 915-1 RSSL of 0.68 milligrams per kilogram (mg/kg) in all samples ranging from 1.46 mg/kg in Unit 31 BW (18') to 4.1 mg/kg in Unit 31 N (4-6'). All soil sample results for arsenic were within the maximum local background for the Jerry-Thronburgh-Rhone Complex at a concentration of 4.67 mg/kg in sample WC BG-SP15 (0-6").
- Hexavalent chromium sample results were below the laboratory practical quantitation limit (PQL) of 1.0 mg/kg, except for Unit 31 SW3 (5') reported at 0.99 mg/kg. Samples Unit 31 B2 (18'), Unit 31 B2 N (16') Unit 31 B2 S (16'), Unit 31 B2 E (16') and Unit 31 B2 W (16') were reported as estimated values. Consideration of Table 915-1 footnote 9 is requested for all non-detect samples.

- pH was reported above the Table 915-1 upper limit of 8.3 in soil samples Unit 31 FL NSW (3.5') with a value of 8.8, Unit 31 FL SSW (2') with a value of 8.49 and soil sample Unit 31 FL WSW (2') with a value of 8.46.

All remaining sample results were compliant with the applicable Table 915-1 RSSLs and Soil Suitability for Reclamation Standards. The wellhead excavation soil analytical results are summarized in **Table 1**. The flowline excavation soil analytical results are summarized in **Table 2**. The laboratory analytical reports are included as an **Attachment**.

DISCUSSION AND CONCLUSIONS

A database search revealed that the depth to groundwater in this area is approximately 44 to 420 ft-bgs. Based on this, Entrada asserts that there is no clear path to groundwater on this Site and that Residential Soil Screening Levels should be used.

Hexavalent chromium sample results were below the laboratory practical quantitation limit (PQL) of 1.0 mg/kg, except for Unit 31 SW3 (5') reported at 0.99 mg/kg. Samples Unit 31 B2 (18'), Unit 31 B2 N (16') Unit 31 B2 S (16'), Unit 31 B2 E (16') and Unit 31 B2 W (16') were reported as estimated values. Consideration of Table 915-1 footnote 9 is requested for all non-detect samples. Arsenic was reported above the Table 915-1 RSSL of 0.68 milligrams per kilogram (mg/kg) in all samples ranging from 1.46 mg/kg in Unit 31 BW (18') to 4.1 mg/kg in Unit 31 N (4-6'). All soil sample results for arsenic were within the maximum background for the Jerry-Thornburgh-Rhone Complex at a concentration of 4.67 mg/kg in sample WC BG-SP15 (0-6").

The slightly elevated pH values, ranging from 8.46 to 8.8, found in the flowline trench excavation are in the footprint of the Bureau of Land Management (BLM) access road at depths ranging from 2 to 3.5 ft-bgs. This maintained road has been routinely traveled by both the public and Chevron field personnel for years and is not a viable location for vegetative growth. Furthermore, the road will remain in place once reclamation of the Site is completed to allow for continued access to public lands. Due to the above, Chevron requests relief of the Table 915-1 Soil Suitability for Reclamation pH concentration.

Based upon field screening and soil sampling activities completed at the site and laboratory analytical data presented herein, Entrada recommends that Chevron pursue closure of this Site with the COGCC.

Any additional soil needed for excavation and reclamation activities will be imported to the Site from the Urie Pit located in Rangely, Colorado or the United Pit located in White River City, Colorado. An analytical summary including laboratory reports is included as an **Attachment**.

We appreciate the opportunity to assist Chevron USA Inc. Please contact me (970) 270-2986 if you have any questions.

Sincerely,

ENTRADA CONSULTING GROUP, INC

Tim Dobranksy
Principal Scientist

Notes:

mg/kg - milligrams per kilogram

J1 - surrogate recovery limits have been exceeded; values are outside upper control limits

J2 - surrogate recovery cannot be used for control limit evaluation due to dilution

O1 - the analyte failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference

su - standard units

NT - parameter was not tested

B - analyte detected in the associated Method Blank above the Reporting Limit

J - the identification of the analyte is acceptable; the reported value is an estimate.

T8 - sample(s) received past/too close to holding time expiration

Over COGCC Table 915-1 concentration levels but under BACKGROUND level.

Over COGCC Table 915-1 concentration levels and not within BACKGROUND level.

LABORATORY ANALYTICAL REPORTS

17-Dec-2021

Tim Dobranksy
Entrada Consulting Group
330 Grand Ave.
Suite C
Grand Junction, CO 81501

Re: **Chevron Wilson Creek Unit 31 Reclamation**

Work Order: **21120482**

Dear Tim,

ALS Environmental received 1 sample on 03-Dec-2021 10:00 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental - Holland and for only the analyses requested.

Sample results are compliant with industry accepted practices and Quality Control results achieved laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 21.

If you have any questions regarding this report, please feel free to contact me:

ADDRESS: 3352 128th Avenue, Holland, MI, USA
PHONE: +1 (616) 399-6070 FAX: +1 (616) 399-6185

Sincerely,

A handwritten signature in black ink, appearing to read "Chad Whelton".

Electronically approved by: Chad Whelton

Chad Whelton
Project Manager

Report of Laboratory Analysis

Certificate No: MN 026-999-449

ALS GROUP USA, CORP Part of the ALS Laboratory Group A Campbell Brothers Limited Company

Client: Entrada Consulting Group
Project: Chevron Wilson Creek Unit 31 Reclamation
Work Order: **21120482**

Work Order Sample Summary

Lab Samp ID	Client Sample ID	Matrix	Tag Number	Collection Date	Date Received	Hold
21120482-01	Unit 31 N	Soil		12/1/2021 11:40	12/3/2021 10:00	<input type="checkbox"/>

Client: Entrada Consulting Group
Project: Chevron Wilson Creek Unit 31 Reclamation
Work Order: 21120482

Case Narrative

Batch 188441, Method SW8015D, Sample Unit 31 N (21120482-01A): GRO surrogate recovery high due to matrix interference.

Batch 189018, Method SW7196A, Sample 21120482-01A MS/MSD: The MS/MSD recovery was below the lower control limit. The corresponding result in the parent sample may be biased low for this analyte: hexavalent chromium.

<u>Qualifier</u>	<u>Description</u>
*	Value exceeds Regulatory Limit
**	Estimated Value
a	Analyte is non-accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
Hr	BOD/CBOD - Sample was reset outside Hold Time, value should be considered estimated.
J	Analyte is present at an estimated concentration between the MDL and Report Limit
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL
X	Analyte was detected in the Method Blank between the MDL and Reporting Limit, sample results may exhibit background or reagent contamination at the observed level.

<u>Acronym</u>	<u>Description</u>
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
LOD	Limit of Detection (see MDL)
LOQ	Limit of Quantitation (see PQL)
MBLK	Method Blank
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PQL	Practical Quantitation Limit
RPD	Relative Percent Difference
TDL	Target Detection Limit
TNTC	Too Numerous To Count
A	APHA Standard Methods
D	ASTM
E	EPA
SW	SW-846 Update III

<u>Units Reported</u>	<u>Description</u>
% of sample	Percent of Sample
mg/Kg-dry	Milligrams per Kilogram Dry Weight
mg/L	Milligrams per Liter
mmhos/cm @25°C	Millimhos-Centimeter at 25 Degrees Celcius
none

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.	1 Cp
ND	Not detected at the Reporting Limit (or MDL where applicable).	2 Tc
RDL	Reported Detection Limit.	3 Ss
Rec.	Recovery.	4 Cn
RPD	Relative Percent Difference.	5 Sr
SDG	Sample Delivery Group.	6 Qc
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	7 GI
U	Not detected at the Reporting Limit (or MDL where applicable).	8 Al
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	9 Sc
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

Qualifier	Description
B	The same analyte is found in the associated blank.
J	The identification of the analyte is acceptable; the reported value is an estimate.
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits.
J3	The associated batch QC was outside the established quality control range for precision.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
J7	Surrogate recovery cannot be used for control limit evaluation due to dilution.
O1	The analyte failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference.
P1	RPD value not applicable for sample concentrations less than 5 times the reporting limit.
T8	Sample(s) received past/too close to holding time expiration.
V	The sample concentration is too high to evaluate accurate spike recoveries.

RE: Project: CHEVRON WILSON CREEK UNIT 31
Pace Project No.: 60403280

Dear Tim Dobransky:

Enclosed are the analytical results for sample(s) received by the laboratory on June 18, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Kansas City

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Heather Wilson

ANALYTICAL RESULTS

Project: CHEVRON WILSON CREEK UNIT 31
Pace Project No.: 60403280

Sample: UNIT 31-FL-WSW (3.5) Lab ID: 60403280010 Collected: 06/16/22 14:45 Received: 06/18/22 12:40 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

QUALIFIERS

Project: CHEVRON WILSON CREEK UNIT 31
Pace Project No.: 60403280

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.
ND - Not Detected at or above adjusted reporting limit.
TNTC - Too Numerous To Count
J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.
MDL - Adjusted Method Detection Limit.
PQL - Practical Quantitation Limit.
RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.
S - Surrogate
1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.
LCS(D) - Laboratory Control Sample (Duplicate)
MS(D) - Matrix Spike (Duplicate)
DUP - Sample Duplicate
RPD - Relative Percent Difference
NC - Not Calculable.
SG - Silica Gel - Clean-Up
U - Indicates the compound was analyzed for, but not detected.
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.
Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.
Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.
TNI - The NELAC Institute.

ANALYTE QUALIFIERS

- | | |
|----|---|
| CH | The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high. |
| M1 | Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery. |
| S4 | Surrogate recovery not evaluated against control limits due to sample dilution. |
| S5 | Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis). |

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Sample Narrative:

OS: Dilution and surrogate failure due to matrix interference.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.	1 Cp
ND	Not detected at the Reporting Limit (or MDL where applicable).	2 Tc
RDL	Reported Detection Limit.	3 Ss
Rec.	Recovery.	4 Cn
RPD	Relative Percent Difference.	5 Sr
SDG	Sample Delivery Group.	6 Qc
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	7 Gi
U	Not detected at the Reporting Limit (or MDL where applicable).	8 Al
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	9 Sc
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

Qualifier	Description
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits.
J2	Surrogate recovery limits have been exceeded; values are outside lower control limits.
J3	The associated batch QC was outside the established quality control range for precision.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
T8	Sample(s) received past/too close to holding time expiration.
V	The sample concentration is too high to evaluate accurate spike recoveries.

RE: Project: Chevron Wilson Creek Unit 31 R
Pace Project No.: 10620127

Dear Tim Dobransky:

Enclosed are the analytical results for sample(s) received by the laboratory on August 06, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Minneapolis

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Lyle Cable
lyle.cable@pacelabs.com

ANALYTICAL RESULTS

Project: Chevron Wilson Creek Unit 31 R
Pace Project No.: 10620127

Sample: Unit 31 B2 E Lab ID: 10620127004 Collected: 08/04/22 10:15 Received: 08/06/22 09:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

QUALIFIERS

Project: Chevron Wilson Creek Unit 31 R

Pace Project No.: 10620127

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

WORKORDER QUALIFIERS

WO: 10620127

[1] The samples were received outside of required temperature range. Analysis was completed upon client approval.

SAMPLE QUALIFIERS

Sample: 10620127001

[1] Wet Chemistry by Method 9050AMod - at 25C

Sample: 10620127002

[1] Wet Chemistry by Method 9050AMod - at 25C

Sample: 10620127003

Pace Project No.: 10620127

SAMPLE QUALIFIERS

Sample: R3831255-3

- [1] Wet Chemistry by Method 9050AMod - at 25C

Sample: R3831255-4

- [1] Wet Chemistry by Method 9050AMod - at 25C

Sample: L1524187-03

- [1] Wet Chemistry by Method 9050AMod - at 25C

BATCH QUALIFIERS

Batch: 834523

- [M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: 834874

- [M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

- BC The same analyte was detected in an associated blank at a concentration above 1/2 the reporting limit but below the laboratory reporting limit.
N2 The lab does not hold NELAC/TNI accreditation for this parameter but other accreditations/certifications may apply. A complete list of accreditations/certifications is available upon request.

RE: Project: Chevron Wilson Creek Unit 31 P
Pace Project No.: 10621022

Dear Tim Dobransky:

Enclosed are the analytical results for sample(s) received by the laboratory on August 12, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Minneapolis

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Lyle Cable

ANALYTICAL RESULTS

Project: Chevron Wilson Creek Unit 31 P
Pace Project No.: 10621022

Sample: Unit 31 SW3 Lab ID: 10621022001 Collected: 08/10/22 12:20 Received: 08/12/22 08:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: Chevron Wilson Creek Unit 31 P

Pace Project No.: 10621022

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

BATCH QUALIFIERS

Batch: 834933

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: 835255

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

1M Preserved from glass jar with headspace outside of 48 hours from collection.

2M Preserved from glass jar with headspace outside of 48 hours from collection.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

N2 The lab does not hold NELAC/TNI accreditation for this parameter but other accreditations/certifications may apply. A complete list of accreditations/certifications is available upon request.

ANALYTICAL SUMMARY REPORT

August 19, 2022

Entrada Consulting Group
1843 Sunlight Dr.
Longmont, CO 80504-2090

Work Order: H22080435 Quote ID: H15424

Project Name: Chevron Wilson Creek Unit 31

Energy Laboratories Inc Helena MT received the following 1 sample for Entrada Consulting Group on 8/12/2022 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
H22080435-001	Unit 31 SW3 (5')	08/10/22 12:20	08/12/22	Soil	Metals, CACL2 Extractable Metals, Saturated Paste Conductivity, Saturated Paste Extract pH, Saturated Paste CaCl2 Hot Water Soil Extraction ASA25-9 Saturated Paste Extraction ASA Sodium Adsorption Ratio Soil Preparation USDA1

The analyses presented in this report were performed by Energy Laboratories, Inc., 3161 E. Lyndale Ave., Helena, MT 59604, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

If you have any questions regarding these test results, please contact your Project Manager.

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

ANALYTICAL SUMMARY REPORT

September 02, 2022

Entrada Consulting Group
1843 Sunlight Dr.
Longmont, CO 80504-2090

Work Order: H22080845 Quote ID: H15424

Project Name: Chevron Wilson Creek Unit 31

Energy Laboratories Inc Helena MT received the following 2 samples for Entrada Consulting Group on 8/26/2022 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
H22080845-001	Unit 31 BW (18')	08/25/22 10:15	08/26/22	Soil	pH, Saturated Paste Saturated Paste Extraction ASA Soil Preparation USDA1
H22080845-002	Unit 31 B2 S (16')	08/25/22 0:00	08/26/22	Soil	pH, Saturated Paste Saturated Paste Extraction ASA

The analyses presented in this report were performed by Energy Laboratories, Inc., 3161 E. Lyndale Ave., Helena, MT 59604, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

If you have any questions regarding these test results, please contact your Project Manager.

In certain circumstances, samples submitted to Energy Laboratories, Inc. may be subcontracted to other certified laboratories in order to complete the analysis requested. This serves as notice of this possibility. All subcontracted data will be clearly noted on your analytical report.

WILSON CREEK BACKGROUND SOIL RESULTS

LEGEND

- Blazon, moist-Rentsac complex, 8 to 65 percent slopes
- Jerry-Thornburgh-Rhone complex, 8 to 65 percent slopes
- Mergel-Redthayne-Dollard complex, 8 to 65 percent slopes
- Owen Creek-Jerry-Burnette loams, 5 to 35 percent slopes
- Rhone-Northwater-Lamphier loams, 3 to 50 percent slopes
- Shawa loam, 3 to 8 percent slopes
- Silas loam, 0 to 8 percent slopes
- Torriorthents-Rock outcrop complex, 15 to 90 percent slopes
- Waybe-Vandamore variant-Rock outcrop complex, 5 to 30 percent slopes

RE: Project: URIE PIT
Pace Project No.: 60405242

Dear Tim Dobransky:

Enclosed are the analytical results for sample(s) received by the laboratory on July 12, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Kansas City

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Angie Brown for
Heather Wilson

QUALIFIERS

Project: URIE PIT
Pace Project No.: 60405242

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.
ND - Not Detected at or above adjusted reporting limit.
TNTC - Too Numerous To Count
J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.
MDL - Adjusted Method Detection Limit.
PQL - Practical Quantitation Limit.
RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.
S - Surrogate
1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.
LCS(D) - Laboratory Control Sample (Duplicate)
MS(D) - Matrix Spike (Duplicate)
DUP - Sample Duplicate
RPD - Relative Percent Difference
NC - Not Calculable.
SG - Silica Gel - Clean-Up
U - Indicates the compound was analyzed for, but not detected.
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.
Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.
Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.
TNI - The NELAC Institute.

ANALYTE QUALIFIERS

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
S0 Surrogate recovery outside laboratory control limits.

The analyses presented in this report were performed by Energy Laboratories, Inc., 3161 E. Lyndale Ave., Helena, MT 59604, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

If you have any questions regarding these test results, please contact your Project Manager.

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

Contact and Corrective Action Comments:

No time listed on COC when samples were relinquished. Sample ID on container is "20220711 - Uriel Pit", Sample ID on COC is "Uriel Pit" Sample logged in with additional information from sample container. 7/14/2022 STP.

Sample Delivery Group: L1517215

Samples Received: 07/21/2022

Project Number: 022-042

Description: Meeker Pit

Report To: Tim Dobransky
330 Grand Avenue
Suite C
Grand Junction, CO 81501

Entire Report Reviewed By:

Chris Ward
Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.	¹ Cp
ND	Not detected at the Reporting Limit (or MDL where applicable).	² Tc
RDL	Reported Detection Limit.	³ Ss
Rec.	Recovery.	⁴ Cn
RPD	Relative Percent Difference.	⁵ Sr
SDG	Sample Delivery Group.	⁶ Qc
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	⁷ GI
U	Not detected at the Reporting Limit (or MDL where applicable).	⁸ AI
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	⁹ Sc
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

Qualifier	Description
B	The same analyte is found in the associated blank.
J	The identification of the analyte is acceptable; the reported value is an estimate.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
T8	Sample(s) received past/too close to holding time expiration.

ANALYTICAL SUMMARY REPORT

August 02, 2022

Entrada Consulting Group
1843 Sunlight Dr.
Longmont, CO 80504-2090

Work Order: H22070658 Quote ID: H15424

Project Name: Meeker pit

Energy Laboratories Inc Helena MT received the following 1 sample for Entrada Consulting Group on 7/21/2022 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
H22070658-001	Meeker Pit	07/20/22 8:15	07/21/22	Soil	ABDPTA Extractable Metals Cation Exchange Capacity Metals, NH4OAC Extractable Metals, Saturated Paste Exchangeable Sodium Percentage Anions, Water Extractable Lime as CaCO ₃ Ammonia as N, KCL Extract Nitrate as N, KCL Extract Organic Carbon/Matter Walkley- Black pH, Saturated Paste Phosphorus-Olsen ABDTPA extraction for metals ASA3- 5.2 NH4AC Soil Extraction for CEC USDA19 DI Water Soil Extract ASA10-3 KCL Soil Extract ASA33-3 Lime Percentage USDA23c NaHCO ₃ Soil Extract ASA24-5 Ammonium Acetate Extraction ASA13-3 Total Organic Matter Prep ASA29-3 Particle Size Analysis / Texture Prep ASA15-5 Saturated Paste Extraction ASA Particle Size Analysis / Texture Saturation Percentage Soil Preparation USDA1

The analyses presented in this report were performed by Energy Laboratories, Inc., 3161 E. Lyndale Ave., Helena, MT 59604, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

If you have any questions regarding these test results, please contact your Project Manager.

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.	¹ Cp
ND	Not detected at the Reporting Limit (or MDL where applicable).	² Tc
RDL	Reported Detection Limit.	³ Ss
Rec.	Recovery.	⁴ Cn
RPD	Relative Percent Difference.	⁵ Sr
SDG	Sample Delivery Group.	⁶ Qc
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	⁷ GI
U	Not detected at the Reporting Limit (or MDL where applicable).	⁸ Al
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	⁹ Sc
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

Qualifier	Description
B	The same analyte is found in the associated blank.
J	The identification of the analyte is acceptable; the reported value is an estimate.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
T8	Sample(s) received past/too close to holding time expiration.

ANALYTICAL SUMMARY REPORT

August 02, 2022

Entrada Consulting Group
1843 Sunlight Dr.
Longmont, CO 80504-2090

Work Order: H22070659 Quote ID: H15424

Project Name: Meeker pit

Energy Laboratories Inc Helena MT received the following 1 sample for Entrada Consulting Group on 7/21/2022 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
H22070659-001	United Pit	07/20/22 10:00	07/21/22	Soil	ABDPTA Extractable Metals Cation Exchange Capacity Metals, NH4OAC Extractable Metals, Saturated Paste Exchangeable Sodium Percentage Anions, Water Extractable Lime as CaCO ₃ Ammonia as N, KCL Extract Nitrate as N, KCL Extract Organic Carbon/Matter Walkley-Black pH, Saturated Paste Phosphorus-Olsen ABDTPA extraction for metals ASA3-5.2 NH4AC Soil Extraction for CEC USDA19 DI Water Soil Extract ASA10-3 KCL Soil Extract ASA33-3 Lime Percentage USDA23c NaHCO ₃ Soil Extract ASA24-5 Ammonium Acetate Extraction ASA13-3 Total Organic Matter Prep ASA29-3 Particle Size Analysis / Texture Prep ASA15-5 Saturated Paste Extraction ASA Particle Size Analysis / Texture Saturation Percentage Soil Preparation USDA1

The analyses presented in this report were performed by Energy Laboratories, Inc., 3161 E. Lyndale Ave., Helena, MT 59604, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

If you have any questions regarding these test results, please contact your Project Manager.

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

WELLHEAD AND FLOWLINE CLOSURE CHECKLISTS

WILSON CREEK UNIT 31 REM # 20334

Wellhead Closure Checklist COGCC Rule 911.a.(4) Environmental Site Closure Assessment Field Form

Additional attachments (optional):	Pit Closure	Tank Battery Closure	Flowline Closure	Partially Buried Vault Closure
Site Name & COGCC Facility Number:	Date:	Remediation Project #: 20334		
Unit 31 228853	11/8/21 - 8/25/22			
Associated Wells:	Age of Site:	Number of Photos Attached:		
Wilson Creek Unit 31	60+ yrs			
Location: (GPS coordinates of wellhead or southeastern most wellhead for multiple)		Estimated Facility Size (acres): 10		
40.172194, -107.905431				

General Condition of Site: (General observations regarding housekeeping, corrosion, waste management, etc.)
 General surface conditions look good. No surface staining or major leaks noted. Oil impacted soils observed during initial bellhole excavation on 12/1/21.

USCS Soil Type: Jerry Thornburgh - Rhone - Complex (Loam) Estimated Depth to Groundwater: >50'

Hydrocarbon Impacted Soils / Spills: (Note estimated size and if impact appears to be surficial or extends to an unknown depth)
 Oil impacted soils in and around wellhead cellar observed during initial bellhole on 12/1/21. Impacted soil removal began in Spring 2022 until compliance w/ Table 915-1 met in August 2022. Final Excavation footprint approx 150'x170'x18'

Salt Crusted Soils or Impacted Vegetation: (Note estimated size and if impact appears to be surficial or extends to an unknown depth)

None Observed - Working Surface.

Wellhead(s)

Well API	103-05843					
Age	60+ yrs					
Condition of surface around wellhead	Minor Staining, Gravel Surface					
PID Readings	269.8 ppm					
Condition of subsurface (staining present)	Oil Stained Soil at Cellar Bellhole.					
PID Readings	Max of 180.2 Unit 31 N.					
Sample taken? Location/Sample ID#	Unit 31 N (4-6)					
Photo Number(s)	Pg. 2					

Other observations regarding wellheads: Bottomless concrete cellar. Impacted soils (oil/hydrocarbon) observed on 12/1/21 at time of initial bellhole. Excavation began in 2022 Spring - Entrada began screening and assessment of excavation in May 2022.

Summary

Was impacted soil identified?	No	Yes - less than 10 cubic yards	Yes - more than 10 cubic yards
Total number of samples field screened:	26	Total number of samples collected:	22
Highest PID Reading:	269.8 Surface @ WH 11/8/21	Total number of samples submitted to lab for analysis:	22
If more than 10 cubic yards of impacted soil were observed:			
Vertical extent:	18'	Estimated spill volume:	Unknown - Historical
Lateral extent:	150'x170' (approx)	Volume of soil removed:	Approx 2300 cu yds.
Is additional investigation required?			
No			
Was groundwater encountered during the investigation?			
No Yes - not impacted or in contact with impacted soils Yes - groundwater impacted and/or in contact with impacted soils			
Measured depth to groundwater:		Was remedial groundwater removal conducted? Yes No	
Date Groundwater was encountered:		Commencement date of removal:	
Sheen on groundwater?		Volume of groundwater removed prior to sampling:	
Free product observed?		Volume of groundwater removed post sampling:	
Total number of samples collected:		Total Volume of groundwater removed:	
Total number of samples submitted to lab for analysis:			

WILSON CREEK UNIT 31 REM # 20334

Flowline Closure Checklist

COGCC Rule 911.a.(4) Environmental Site Closure Assessment Field Form

Additional Attachments:	Tank Battery Closure	Wellhead Closure	Pit Closure	Partially Buried Vault Closure
Site Name & COGCC Facility Number: Unit 31 2288S3	Date:	Remediation Project #: 20334		
Associated Wells: Wilson Creek Unit 31	Age of Site:	Number of Photos Attached:		
Starting point: (GPS coordinates and descriptions) 40.172189°, -107.905441°				
End point: (GPS coordinates and descriptions) 40.172201°, -107.905171°				
USCS Soil Type: Jerry-Thornburgh-Rhone Complex (loam)	Estimated Depth to Groundwater: >50'			
Hydrocarbon Impacted Soils / Spills: (Note estimated size and if impact appears to be surficial or extends to an unknown depth) - Small release area observed on eastern section of line under BLM Road. Main depth of impacts 2.5'-3' bgs. - No impacts observed @ 5' bgs. Impacted area approx 5' x 5' x 3'				
Salt Crusted Soils or Impacted Vegetation: (Note estimated size and if impact appears to be surficial or extends to an unknown depth) None Observed.				
Flowlines				
Flowline type	O:1			
Depth	2.5'			
Age	60+ yrs?			
Length	± 80'			
Construction Material	Steel			
Were flowlines pulled?	Yes			
Visual Integrity of lines	Pinhole near Release			
Visual impacts if trenched	Yes			
PID Readings if trenched	Yes			
Sample taken?	Yes			
Location/Sample ID#	Multiple			
Photo Number(s)	Pg 4			
Other observations regarding on location flowlines: Flowline pulled and inspected during overall impacted soil removal @ well head. Pinhole leak observed on east end of line under road. Petroleum impacted soil removed unmediated along w/ FL. No impacts observed below 5' bgs. Impacted soil taken to Ump Gash.				
Summary				
Was impacted soil identified?	No		Yes - less than 10 cubic yards	Yes - more than 10 cubic yards
Total number of samples field screened:	7		Total number of samples collected:	6
Highest PID Reading:	672.6' - Unit 31 FL2 (2') (origin)		Total number of samples submitted to lab for analysis:	6
