Photo 1. Drone aerial imagery illustrates the interim reclamation area for the HSR-Vadney location, a portion of the associated access road, and the Lorraine Adams property (red arrows). Photo illustrates weed management is being performed around the wellhead and Lorraine property (orange polygon), but the remainder of the interim area consists mostly of Common rye and Cheatgrass was observed in patches but more persistent south of the wellhead (reddish vegetative color). Smooth brome has established along portions of the northern interim area but has diminished around the wellhead and south of the wellhead where Cheatgrass was observed.

Photo 3. Photo taken from the northeastern area, facing West. Photo illustrates the current vegetation which is predominantly undesirable annual vegetation, Common rye.

Smooth brome was observed in small patches along the north-central and northwestern interim areas.

Photo 4. Photo taken north of the wellhead, facing East. Photo illustrates the area that was described in Photo 1 as being actively managed for weeds.

Note- there has been a decrease in Smooth brome within this actively managed area.
