Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

A release of produce/brine water was discovered at the facility when a third-party pumper noticed water spraying from the above ground pipeline that feed the injection well. Notice was made to the Tallgrass Operator at which time the injection well was shut in to prevent further release. A vacuum truck was dispatched to collect produced/brine water that had pooled on the pad, at this time no offsite impacts have been identified. At the time of the release, pooled rain water was on the site due to a recent rain event. That water has been collected as well
