<p>Following partial flowline removal at the VOGL 5-8A location on June 21, 2023, a soil samples was collected from the location where the flowline riser was disconnected at the separator (FL-B02@4'). Based on field observations, PID readings, and preliminary analytical results described herein, sample FL-B02@4' was selected for waste characterization purposes and was submitted for laboratory analysis of the full COGCC Table 915-1 analytical suite, using standard methods appropriate for detecting the target analytes. Preliminary analytical results received on June 22, 2023, indicate that the naphthalene concentration in samples FL-B02@4' exceeded the COGCC Table 915-1 Protection of Groundwater Soil Screening Level Concentrations. Additional analytical results are pending laboratory analysis and final reporting. Excavation and assessment activities are ongoing and will be summarized in a forthcoming quarterly Form 27-Supplemental Site Investigation and Remediation Workplan under Remediation Project No. 29026 (approved Form 27 Document No. 403374429). A topographic Site Location Map showing the geographic setting of the release is provided as Figure 1. Soil sample location and field screening data are provided in Table 1.
