

Client	Civitas
Operator	Bonanza Creek
Location ID - Name	CPW North Side
Type	Well, Tank Battery, Roads, Reference

The logo for Soil Sage features the word "SOIL" in a dark brown serif font, followed by a circular icon containing a green plant sprout, and then the word "SAGE" in a green serif font.

Terms Defined

pH	A measure of the acidity or basicity (alkalinity) of a soil. pH is defined as the negative logarithm (base 10) of the activity of hydronium ion in a solution
ECE	The Electrical Conductivity of a saturated soil Extract that measures salinity
Alkalinity	Alkalinity indicates a solution's power to react with acid and buffer its pH - the power to keep its pH from changing.

CEC - Cation Exchange Capacity
CEC Ranges
Range 11-50
Range 1-10

Optimal pH range for plant growth
6.0 -7.0

The higher the Alkanility, the higher the buffering capacity against pH change.
The measure of how many cations can be retained on soil particle surfaces.
High Clay, more lime to correct a given pH, greater capacity to hold nutrients, physical effects of high clay content, high water-holding capacity
High Sand, Nitrogen and potassium leaching, less lime to correct a given pH, physical effects of high sand content, low water-holding capacity
