## Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

### INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

From the initial form 19:

During the course of line inspection, Grand River Gathering (GRG) personnel noticed odors consistent with natural gas. Upon further inspection GRG personnel identified location of leak. GRG personnel immediately isolated affected line and blew down. GRG environmental response personnel were notified. Affected area has been contained, Emergency OneCalls have been completed and HydroVac has been scheduled to visually identify point of release and recover potentially impacted surface soils. Delineation of impacts and remediation per applicable series 900 rules, including table 915.

Gathering line was excavated and repaired in May 2021.

**OPERATOR COMMENT**

Grand River Gathering (GRG) proposes the following drilling and sampling plan to delineate this spill: 1 boring outside the original excavation area (south) to laterally delineate inorganic impacts. For this boring, GRG requests the reduced analyte suite of SAR only.

GRG plans to use produced water/operator knowledge for any unaddressed Arsenic and/or pH exceedances.

Please see attached Figure for planned drilling and sampling locations. Please see previously submitted data (Doc # 403395394) for exceedances at this Site.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
