BRADENHEAD MITIGATION PLAN

Upland Exploration LLC (Upland), has drafted this plan in accordance with Rule 419.b.(4).C.

This well underwent its annual 2023 bradenhead test on June 29, 2023, reported on Form 17, Document # 403461689. The initial surface casing pressure was at 150 psi; upon commencement of the test, bradenhead blew down to zero. All casings held their pressures during the test.

Upland will incorporate digital gauges and will continue to monitor the bradenhead pressure regularly.

Upland will blow down the bradenhead pressure to the gas sales line as necessary to mitigate high pressures.
