Details of Plan of Work: (State names of and expected depths to objective sands: Show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work.)

The above described well was drilled to a depth of 180' (KB) on September 12, 1951.

On September 13, 1951, the surface casing, consisting of 5 joints of 10-3/4" OD, H-40, 32.75#/ft. casing, totaling 161.72' was landed at 174.52 (KB) and cemented with 115 sacks of cement. A guide shoe was run on the first joint. Top and bottom plugs were used and the top plug was stopped at 155', so as to leave 20 feet of cement in the casing. The cement was in place at 7:00 AM on September 13, 1951. Cement returns were obtained at the surface.

The cement was allowed to set for 24 hours at which time a pressure of 500 psi was applied to the casing for one hour. No leakage was noticed so the plug was drilled at 7:00 PM, on September 14, 1951.
