#### SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Impacted soil was treated with Oil Gator bioremediation product on September 21, 2021 and mixed into the impacted soil. SDS and product application description are attached hereto. The product was further mixed on October 28, 2021 and November 10, 2021. Second round of soil samples were collected on December 14th, 2021, and third round was collected on February 28, 2022. Results showed improvement in soil quality through the treatment process. A second round of bioremediation product was applied on June 10, 2022, however soil samples, completed on July 27th, 2022, indicated no improvement from remediation attempts. Between October 4th and 14th, 2022, 432 tons (308 cubic yards) of source material from the Red Dog Pit was removed from the pit and hauled by a third party to the Trinidad Landfill. Additional samples were then completed on October 26th, 2022 March 14, 2023 and May 22, 2023.

#### REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.
