## Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

### DESCRIPTION OF IMPACT

Impacted?	Impacted Media	Extent of Impact	How Determined
Yes	SOILS	44'L X 31'W X 20'D	Visual, Field Screening, Excavation

### INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

From the initial and supplemental Form 19s:

Gas release discovered at PI20 Well Pad on Sales Line about 20 ft north of launcher. Release location is between launcher and meter. The release appears to be within a 1x2 ft area. The estimated release volume is based on initial observation and will be updated as more information becomes available. The release was stopped immediately after discovery and line has been Locked Out and Tagged Out.

The extent of the impacted soil area is still being determined at this time. Excavation is still underway as weather has delayed full delineation of the site. Final impact extent will be updated as information is available. After preliminary excavation, the leak appears to be from a 3/8" hole at the 5 o'clock position on the 8" line. Contractors are on site with equipment digging up the line between the meter and the launcher as weather permits.

Site was excavated and sampled on January 9th 2023 and was cleaned and resampled on January 25th 2023. Please see attached Table, Figure, and Analytical Data.
